

Built-for-Government Enterprise Resource Planning

_experience the commitment™

“This solution will provide us timely and more effective access to information, improving how we deliver services to our citizens and helping maximize taxpayer dollars. In CGI we have a long-time partner that understands the business of government, and [have access to the ERP solution that] can be implemented quickly and easily in our environment.”

J. Tyler McCauley,
Auditor-Controller,
Los Angeles County, California

ENABLING GOVERNMENT TRANSFORMATION

Enterprise resource planning (ERP) is about more than just technology. For state and local government it is about transformation; automating processes, improving access to the right information and keeping pace with change. Through transformation, governments aim to increase efficiency and accountability, improve management and management reporting and reduce total cost of ownership.

Yet today's state and local governments struggle to realize the full potential of their ERP systems. They are challenged by features that don't meet their needs, workflows that don't match their processes, finger pointing between software and integration vendors, and the threat of budget overruns and project delays.

What governments need is a solution developed with them in mind—one that conforms to GASB, GAAP, CAFR, CMIA and FASB out-of-the-box—along with built-for-government functionality that increases automation and access to information while reducing customization for lower total cost of ownership.

CGI is committed to serving the technology needs of state and local government with a powerful combination of technology and comprehensive, integrated business applications. With our AMS Advantage® ERP solution, clients reduce customization and transform paper-intensive processes into online efficiencies. Architected upon open standards, n-tiered and service-oriented architecture (SOA), our proven, web-based technology is helping clients keep pace with change.

A comprehensive suite of best-in-class ERP solutions

CGI's government ERP solution has powered over 190 state and local organizations, efficiently managing over \$500 billion in public funds to better serve 93 million citizens. With integrated functionality, workflow and configurable processes, governments are increasing efficiency, improving access to information and reducing total cost of ownership. Our ERP suite includes:

- CGI's government ERP solution manages over \$500 billion in public funds, which serve 93 million citizens
- In April 2007, The Hackett Group awarded the first-ever Performance Achievement Award to three organizations—Colorado, Mississippi and Massachusetts—all CGI government ERP clients.
- **Financial Management** provides organization-wide accountability by consistently applying accounting rules across all financial transactions, with the ability to track and control internal and external funding sources and fiscal and multi-year budgets, grants and projects.
- **Performance Budgeting** automates the budgeting process for better planning to improve financial and operational performance as well as to make the critical connection between performance measures and results for more efficient day-to-day operations and improved forecasting.
- **Human Resources Management** streamlines the HR and payroll process from hire to retire, including online recruiting, timekeeping and direct access for employees for managing benefits and leave.
- **Procurement** automates purchases online through catalog-based ordering and paperless approval processes, linking it directly to the government accounting system for automated matching and automated payment process.
- **Reporting** unlocks the potential of data for faster, more accurate decisions and increased measurement of key performance indicators.

Built-for-government solution

By balancing built-for-government functionality with web-based technology, CGI's AMS Advantage ERP suite enables government transformation. Drawing upon best practices and our government experience, clients improve efficiency, management and management reporting and reduce total cost of ownership.
