Driver Licensing Solutions

Company profile

At CGI, we're in the business of satisfying clients. For 30 years, we've operated upon the principles of sharing in our clients' challenges and delivering quality services to solve them.

A leading IT and business process services provider, CGI has approximately 25,000 professionals operating in 100+ worldwide offices, giving us close proximity to our clients. Through these offices, we offer local partnerships and a balanced blend of global delivery options to ensure clients receive the combination of value and expertise they require.

CGI defines success by exceeding expectations and helping clients achieve results.

Meeting new intelligence requirements

Intelligence reform is calling for states to improve security and reduce fraud in driver license issuance. While details of the requirements will be dealt with in ensuing regulations, the timeline mandated by new federal legislation doesn't afford states the opportunity to delay planning for how these changes will affect operations. Proactive identification security and fraud prevention activities can and should be taken now to meet these new homeland security challenges.

How CGI can help

CGI believes that we must improve the integrity of driver licensing so that it lives up to its reputation as a reliable personal identification document. With deep experience and subject matter expertise, CGI is a trusted advisor with specialized resources to help states evolve their motor vehicle environments. We offer a variety of services to help you meet new intelligence reform requirements, including:

Planning and risk assessment

Security planning and risk assessment are critical in identifying gaps between current practices, new requirements and an agency's own desired state. This activity identifies and finds causes for problems within your processes and systems, discovers potential consequences for not addressing those issues, outlines options and recommendations for moving forward, and builds a detailed and personalized roadmap for reaching success.

Our planning and risk assessment services align an agency's structure, processes and technologies, and prioritize investments to properly allocate limited resources.

Identification security and fraud prevention

Correctly establishing an applicant's identity is one of the biggest challenge government agencies face when trying to prevent fraud or stop criminal or terrorist use of identification. CGI can help you monitor for external and internal fraud, while improving the security of your systems and operations.

For instance, with our real-time identify fraud and authentication solution, IdenticateSM, motor vehicle employees can automatically verify the identity of a customer by validating that the information supplied is authentic and by checking for possible error or fraud. This is done by comparing customer supplied data with a selected set of internal and external data sources and by using advanced analytics to support the

Meeting new intelligence requirements

decision process. These tools—along with specialized pattern analysis technology—can also help prevent the growing problem of ID theft. Identicate is an existing solution widely used in commercial settings that has been tailored to the requirement to verify the authenticity of documents presented to prove identity.

Development and implementation support

While some providers may promote one-size-fits-all solutions, the truth is that many existing state-based assets can be used to combat the problem of identity fraud and theft. We leverage your existing processes and technologies to deliver a cost-effective and sound solution that improves driver license integrity.

CGI provides a full range of IT and management services, including business process engineering, change management and systems architecture. Implementation services cover the full scope and life cycle of a motor vehicle agency's driver license technology and business environment.

Experience and focused expertise

At CGI, we know the business of government. In our 30 years, we've partnered with a majority of U.S. federal agencies and states, and with more than 300 cities, counties and other local agencies. In the motor vehicles area, we've implemented e-government solutions to help states improve how they deliver services and to enhance their information and financial management processes and systems. We've also helped agencies strengthen critical identification verification processes through our Identicate solution and have developed new solutions for driver license security.

We are committed to helping states make the driver license a more trusted form of personal identification. Change is coming. With our services and expertise, CGI is in the best position to help states prepare for and meet new driver license requirements.

A trusted advisor

CGI has deep subject matter expertise in the driver license process and the information technology systems that support it. Actively involved in government and not-for-profit activities, our professionals are regularly sought as a resource for a variety of activities, from testifying on the topic in front of the U.S. Congress to sponsoring the Driver's License Integrity Project initiative in cooperation with the American Association of Motor Vehicle Administrators.

In all we do, we are a trusted advisor, proposing cost-effective and sound solutions to enhance driver license integrity.

Drawing upon this expertise and our extensive public sector experience, we have implemented proactive identification security and fraud prevention solutions on behalf of our motor vehicle clients. With our solutions, motor vehicle agencies achieve:

- Improved decision making and planning
- Greater efficiency and effectiveness
- Enhanced control and reduced risk
- Cost-effective implementations
