### A Partner of Choice

CGI is a leader in providing innovative business and technology solutions to the healthcare payer industry. Our clear vision and ability to deliver results has made CGI the partner of choice for many BlueCross BlueShield plans, commercial health insurance companies, government healthcare payers and Prescription Benefit Managers (PBMs). Solutions designed for healthcare payers include:

- CAS 5.0 software for comprehensive claims auditing and fraud and abuse detection
- Clinical and compliance auditing
- Prescription benefit claims auditing and analysis services
- Medicare Advantage and Part D services
- Member enrollment, billing and call centers
- Reimbursement consulting and pricing solutions
- Fraud investigation services including special investigative unit outsourcing and co-sourcing
- Complete IT services

CGI understands the challenges healthcare payers face in analyzing claims data from multiple settings including inpatient, outpatient and physician offices. To address these challenges, CGI developed Edit Modules for its Customized Audit System (CAS 5.0) enabling you to audit 100 percent of your medical and pharmacy claims and identify overpaid or inappropriately paid claims.

Edit Modules include:

- Facility (Institutional) - Inpatient and outpatient claims edits
- Professional - Professional claims edits
- Pharmacy - Pharmacy claims edits

Each Edit Module provides analyses of an individual claim and links across claims to identify potential coding inconsistencies between provider types. Examples of this can be seen with Pre-Admission Testing violations and validation of coding between the outpatient and corresponding professional services.

In each Edit Module, the individual edits are categorized as “Push” edits because they provide results automatically to an auditor. These “Push” edits are applied against a single claim and span of encounter situations and the results of these edits can be worked by auditors. When combined with the “Pull” edits via the Business Intelligence Module, a comprehensive view of the data and outliers are easily identified and then acted upon. Each edit can be customized to be turned on or off according to your medical policy and administrative rules and CGI works with each client to determine the applicability of the edit—reducing the number of false-positive results and increasing your audit efficiency.

CGI developed the edits within each module based on our analysis of grouper information, our clinical coders’ experience performing medical record reviews, our statistical and clinical resources, such as data from CMS and First Databank, as well as our experience in evaluating medical and pharmacy data. To effectively communicate your findings to the respective providers, you can access complete documentation and rationale for the CAS 5.0 edits.

The Edit Modules with CAS 5.0 act as a complementary process for your front-end editing engines. Your entire workflow can be adjusted based on your business environment and the challenges that your plan is facing.

## Customized Audit System (CAS 5.0)

**An enterprise-wide solution that helps you efficiently predict, identify, manage and analyze your medical and pharmacy claims**

**Why select CAS 5.0?** This browser-based claims audit tool is unique to the industry because it is designed to your specific business rules and reimbursement methodologies. CAS 5.0 is an enterprise-wide solution that can help you:

- **Predict**—Uses advanced algorithms to predict potential hidden patterns and anomalies within the entire claims data universe.
- **Identify**—Identifies the claims that have the highest potential for revenue optimization through a series of edits, allowing you to easily work on these claims.
- **Manage**—Provides an efficient and comprehensive workflow that includes tracking the entire audit process, recording the findings and generating the associated letters and reports so you can spend more time on the review process and less time on administrative tasks.
- **Analyze**—Provides analytical tools that allow you to easily research claims and audit data through a series of views. This is accomplished at the user level, freeing up valuable IT resources.

## Company Profile

In the competitive IT services industry, it's difficult to know what differentiates one company from the next. With CGI, you can be certain that we put our clients first—we take a unique approach to fostering client satisfaction.

For 30 years, CGI has operated based upon the principles of sharing in clients' challenges and delivering quality services to solve them. A leading IT and business process services provider, CGI has approximately 25,000 professionals operating in 100+ worldwide offices.
