

Landscape.NET - the next generation of insurance management systems

“In the first few months of the system being live, Landscape enabled pricing developments that are delivering significant new business volumes, and also enabled us to enter a new market. Our finance, pricing, customer service and claims teams are all delighted by the breadth of management information now available.”

Mark Collier,
Managing Director
Provident Insurance

The challenge of change - and the need for speed

For insurers today, the pace of business and technology change is a major challenge. At the strategic level, emerging channels and technologically advanced entrants are rapidly creating an entirely new electronically enabled self service culture and marketplace.

Customers are moving faster too - changing their insurance providers more frequently and constantly surfing for the best price and terms. Insurers need to be able to react to market changes and customer demands quickly and effectively in order to stay ahead.

An added challenge is the growing trend for more complex inter-linked products aimed at winning and locking in market share. Insurance companies that cannot innovate and bring new products to market quickly and cost effectively will be seriously disadvantaged in this ever increasing competitive market.

IT systems - are they holding your business back?

Many insurance companies are becoming increasingly constrained by their IT systems which have not evolved to keep pace with this new dynamic insurance market. Often insurers have to work around outdated and cumbersome systems which are functionally disconnected and not able to cope effectively with the new generation of web enabled brokers and customers.

Not only that - many insurance companies have to depend on increasingly complex manual procedures to operate an integrated solution which consume budgets and drain management time.

Today more than ever, insurers need to be able to react to market changes quickly and effectively in order to stay ahead. Systems need to be internet friendly, highly flexible, able to incorporate numerous changes instantly as well as provide integrated management information on the performance of the business 'on demand'.

Landscape.NET - the next generation of insurance management systems

Landscape.NET - the next generation of insurance management systems

CGI and RDT have joined in partnership to deliver Landscape.NET to the Insurance industry. Landscape.NET is a new fully functional policy administration system for today's insurance companies.

Landscape.NET is a complete, highly configurable, proven solution developed by RDT's leading technology team. It has been designed to empower insurers to both maintain their existing portfolios efficiently as well as enabling them to develop innovative ways of gaining new customers.

Landscape.NET is based on Microsoft technology and incorporates all the latest industry standards. It is scalable, robust and functionally rich. It enables insurers to shape their strategies around their business needs and priorities rather than having to manipulate their business activities around what their current systems can deliver.

Landscape.NET can be used 'out of the box' or configured to each company's requirements. It is simple to use, easy to install and has been extensively 'tried and tested' by many leading insurance companies today.

And of course, Landscape.NET is Euro- ready, internet compatible and integrates quickly and simply with other systems to provide straight through business processing.

Landscape.NET delivers significant business benefits

- **Vastly improved MI**

full visibility of all portfolio P & L positions allowing you to identify opportunities for growth and move quickly to stay competitive

- **Speed and flexibility**

allows changes to be made to existing lines rapidly as well as dramatically reducing speed to market for new products

- **Highly configurable**

can be quickly and simply adapted to your company's processes without the need for extensive IT resources

- **Low TCO**

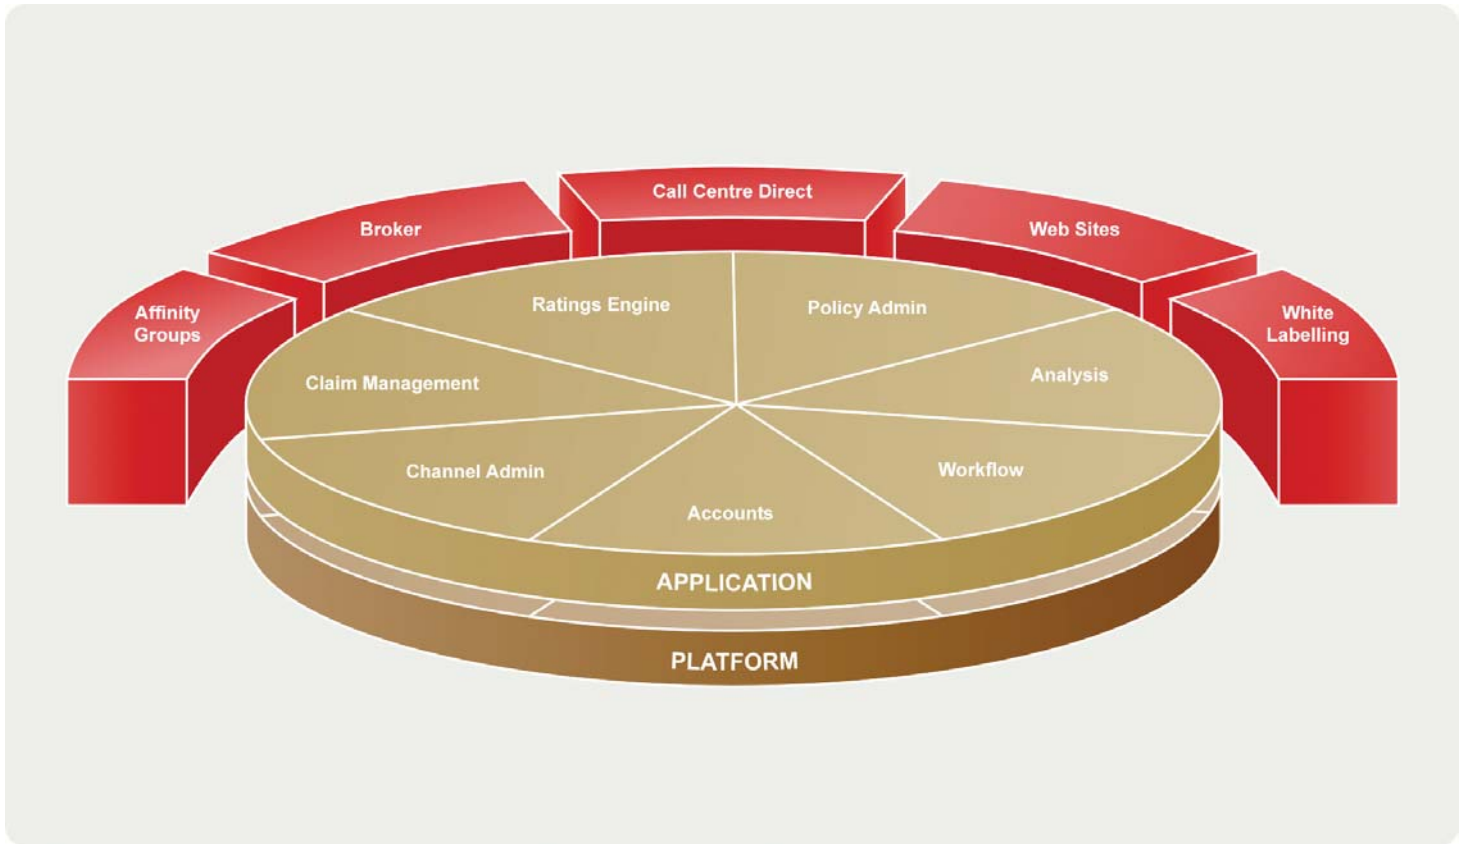

simplified support and flexible configuration delivers significant cost benefits

- **Proven 'low risk' formula**

tried and tested component solution delivered by experts to minimise disruption to everyday business processes

Landscape.Net delivered by CGI is

- Proven in a wide range of insurance companies
- A modern, internet compatible solution with interoperability with other systems and technologies
- Allows new products and solutions to be developed quickly and simply
- Incorporates the latest industry standard technologies - comprehensively leveraging the Microsoft solution stack
- Integrates fully with telephony solutions
- Supports policy and claims administration service for all personal lines

Optimise your systems and see your business win and grow

A combination of RDT's leading edge insurance solution, Landscape.Net, and CGI's deep insurance market knowledge, systems integration experience and delivery capabilities provides insurance companies with a whole new set of options - that can transform the way they do business now and in the future.

CGI - working with you to ensure sustained advantage

CGI has a track record in the Insurance industry for helping customers to optimise their systems to deliver competitive advantage and works with over 800 customers worldwide. This is based on an in-depth knowledge about the industry and its regulations, as well as significant cross industry system integration expertise.

CGI has the right combination of skills and experience to ensure that the Landscape.Net solution is integrated in the most cost effective way to maximise its rich functionality set.

CGI's global delivery model

CGI has developed a specialist industry expertise, knowledge and experience coupled with a local presence in key parts of the world. This enables us to offer right cost, right shore development centres to our customers allowing them to undertake application development in the way that works best for them.

CGI Quality

CGI deploys well tested quality management frameworks, ISO9001 certified to ensure conformity and quality of service. CGI also has a scheme of continuous professional accreditation for its staff as well as many local and global partnerships which are used to provide a range of flexible and proactive services.
