

NEWS FLASH- CGI Releases ProSteward Authoring 8.0

March 2008

Chemical manufacturing companies are challenged with ever-changing global regulations. CGI has helped many companies to address their needs with their regulatory compliant (M)SDS authoring solution-ProSteward.

ProSteward Authoring

The latest release of the ProSteward Authoring (Version 8.0) contains several major enhancements to managing hazard communication documents for our global customer base. The majority of enhancements are functional, including offline translations tools that ease the pain of managing foreign language documents. Unicode support was also added.

Productivity improvements are also included in this release, adding automated processing to be scheduled for off-peak hours. The workflow for accepting OEL regulatory data changes has also been improved, giving a more seamless flow of information into the regulated documents.

ABOUT PROSTEWARD

ProSteward is a best-of-breed hazard communication solution to produce and manage documents in compliance with global rules and regulations, such as REACH, GHS and the OSHA Hazard Communications Standard. The solution consists of six integrated applications.

- > **Authoring** manages data that maintains business, toxicology and regulatory information about materials and, using an intelligent rules engine, creates an unlimited number of document (M)SDSs, labels, shipping documents and more in various regulatory formats and languages.
- > **Use Management** manages substance use information as necessary to be REACH compliant.
- > **EHS Integration Node** supports data flow between ProSteward modules and third party EHS systems such as IUCLID, Volume Tracking and Chemical Safety Assessment Tools.
- > **Online** provides employee access to hazard documents and chemical data and supports chemical inventory and environmental reporting.
- > **Distribution** integrates with an organization's ERP system to automate compliance using the rules engine to distribute documents to customers based on daily sales history, business rules and ad hoc requests.
- > **Labeling** generates content for remote label printing via integration with the Authoring Module, eliminating the need to re-enter information and allowing organizations to achieve consistency among their regulatory documents.

About CGI

CGI is a full service IT and Managed Services Provider with focused industry expertise and innovative service models that help clients achieve their business goals. We have extensive experience in delivering high-quality, integrated regulatory compliance solutions to global enterprises through a combination of proprietary and other best-in-class solutions that leverage our systems integration expertise, domain health and safety expertise and deep experience across industrial segments.

CGI provides an integrated platform of environmental, health, safety; quality/audit and compliance solutions that help clients better serve their markets, improve and sustain competitive advantage, and reduce overall compliance risk.
