

NEWS FLASH- CGI Releases GHS-Compliant ProSteward

March 2007

Chemical manufacturing companies are challenged with ever-changing global regulations. CGI has helped many companies to address their needs with their regulatory compliant (M)SDS authoring solution-ProSteward.

GHS

The latest release of the ProSteward Authoring (Version 7.0) contains functionality to create classifications compliant with the Globally Harmonized System for Classification and Labeling of Chemicals (GHS). The software enhancements to create GHS compliant classifications are based on the building blocks documented in the GHS Purple Book. ProSteward Authoring is highly configurable, allowing for individual company interpretation of each country's specific requirements and for a configuration that is most consistent with your global workflow.

Several CGI clients have upgraded to ProSteward Authoring 7.0 and are generating GHS-compliant (M)SDSs with this new version.

ABOUT PROSTEWARD

ProSteward consists of four related software modules that allow companies to manage a wide range of chemical, regulatory, toxicology, and product data as well as create and distribute hazard communication documents to comply with regulatory and business requirements.

- **Authoring Module** – This module is a flexible, rule-based, three-tier application that provides configurable document authoring to comply with global regulatory requirements for a variety of hazard documents.
- **Online Module** – This module is a configurable and easy-to-use multi-lingual hazard communication and chemical inventory reporting tool that provides Pfizer workers with web-based access to (M)SDSs/hazard information and is readily integrated to other systems.
- **Distribution Module** – This module employs user-controlled, rule-based logic to enable compliance with U.S., Canada, EU, and Asia Pacific (M)SDS external distribution requirements. Documents are distributed automatically via paper mail, fax or E-mail, based on sales information fed to the system through an interface with ERP (sales) systems.
- **Labeling Module** – This module generates content for remote label printing via integration with the Authoring Module, eliminating the need to re-enter information and allowing organizations to achieve consistency among their regulatory documents.

About CGI

CGI is a full service IT and Managed Services Provider with focused industry expertise and innovative service models that help clients achieve their business goals. We have extensive experience in delivering high-quality, integrated regulatory compliance solutions to global enterprises through a combination of proprietary and other best-in-class solutions that leverage our systems integration expertise, domain health and safety expertise and deep experience across industrial segments.

CGI provides an integrated platform of environmental, health, safety; quality/audit and compliance solutions that help clients better serve their markets, improve and sustain competitive advantage, and reduce overall compliance risk.
