

EnergyIT

A PROVEN SOLUTION

EnergyIT has been implemented worldwide and currently tracks consumption data for more than 15,000 facilities and more than 1,000,000 data points (as of May 2010). *EnergyIT* customers have cut their utility costs up to 30%.

EnergyIT is applicable to many types of facilities, including the following:

- Manufacturing plants
- Airports
- Hospitals
- Office buildings
- Data centers
- Water treatment plants

Energy costs are increasing dramatically. Regulatory and consumer concern for environmental impact is also on the rise. Organizations are looking for strategies to manage their energy consumption while maintaining compliance with evolving sustainability requirements.

Energy management IT solutions help organizations reduce energy costs while advancing green initiatives to lower their carbon footprint and overall resource consumption. Through CGI's *EnergyIT*® solution, organizations can identify areas for reducing energy consumption, significantly lowering their utility costs and improving their environmental impact.

Analyzing your energy consumption enterprise-wide

EnergyIT is a web-based energy management tool that provides an enterprise-wide view of utility consumption to help you make effective utility reduction decisions. It offers the following features:

- Monitoring and analysis of historical and real-time utility usage data
- Analysis in the form of reports and executive dashboards
- Comparison to industry-specific performance standards

With *EnergyIT*, organizations benefit from having real-time visibility to energy consumption at a local level (e.g., manufacturing, equipment and product), allowing them to optimize their production-related energy consumption. Organizations are using *EnergyIT* to achieve the following:

- **Corporate sustainability:** *EnergyIT* provides intelligence and reporting for developing strategic goals for energy use, greenhouse gas emissions reduction, water use and green building.
- **Better communication:** *EnergyIT* provides web-reporting capabilities that bring energy usage visibility to all employees and management within an organization.
- **Data uniformity and centralization:** *EnergyIT* serves as a single platform for all corporate and manufacturing site data and analysis, eliminating data islands and the need for manual entry.
- **Bill reconciliation:** *EnergyIT* consumption data can be used to reconcile your utility bills.
- **Production optimization:** *EnergyIT* collects real-time data, giving organizations instant visibility to process changes and anomalies.
- **Streamlined reporting:** *EnergyIT* has a robust reporting interface, presenting management with strategic insight to make better business decisions and optimizing ROI.

EnergyIT is a registered trademark of Vertelis used under license by CGI Technologies and Solutions, Inc.

Key features of CGI's *EnergyIT* solution

- Web based
- Microsoft certified
- Easy to implement — up and running in less than five weeks per facility
- Built and deployed on Microsoft® Application Platform including Microsoft SQL Server® 2008 Enterprise and SQL Server 2008 Reporting Services
- 50 reports pre-built with customized reporting capabilities via SQL Server 2008 reporting services
- Robust reporting and graphics
- Ability to create and publish customized reports and dashboards
- Combines real time and event/process data to determine energy consumptions and trends
- Custom built connectors that can read data from meters, sensors, SCADA and building management systems
- Collects data from *any* utility that is metered
- Can be used for utility bill reconciliation and to track carbon emissions for a given facility
- Can be delivered as a hosted services, or enterprise solution

Why CGI?

- **CGI's breadth of offerings** – CGI's capabilities include full energy efficiency solution, data center services, technology management, energy efficient programs in utilities, environmental and regulatory management, green procurement, and supply chain management.
- **Experience** – As an IT services provider with 30+ years of experience, CGI and our strategic software partner know the most effective and cost-efficient ways to manage energy.
- **Client experience** – *EnergyIT* is a proven solution. Clients using *EnergyIT* have realized up to a 30% reduction in their energy consumption.
