

Built-for-Government Procurement

"[CGI's] eVA is a tool that will help the Commonwealth realize savings through streamlined purchasing processes and lower costs for goods and services. Changing business practices is never easy—but this kind of buying power just makes common sense."

Former Governor Mark Warner,
Commonwealth of Virginia

The Commonwealth of Virginia's award winning, statewide electronic purchasing solution has connected more than 170 agencies, 575 localities and 13,000 users to 45,000 vendors selling 5 million items for a total of 2,300,000 orders and an annual savings of \$36.5 million.

STREAMLINE FOR EFFICIENT PURCHASING AND EFFECTIVE SPENDING

State and local government procurement is about more than buying and selling goods and services. It is about streamlining processes, improving order times, increasing competition, achieving compliance, and lowering prices. Through this transformation, governments aim to improve efficiency and accountability as well as the buying power that fuels decision making.

However, too many state and local governments are strapped to ERP solutions that stovepipe the purchasing process and rely on manual hand-offs and redundant data entry, which cause delays. Governments need an integrated system that streamlines the procurement lifecycle and builds vendor relationships using government-specific functionality, online tools, and best practices.

CGI is committed to these needs with a powerful combination of modern technology and comprehensive, integrated, configurable business applications. With our built-for-government CGI Advantage™ Procurement solution, our customers are transforming paper-intensive processes into online efficiencies. Architected upon open standards, our web-based technology is helping our customers keep pace with change by integrating purchasing requests from disparate systems into a common process.

Beyond basic purchasing

CGI's government procurement software manages the purchasing lifecycle—automating purchases online through catalog-based ordering and automating workflow on approved processes. It is also directly connected to the CGI Advantage accounting system for real-time budget validation, and automated matching and payment processing for goods or services received and accepted. With an end-to-end business process for professionals, vendors, and shoppers, CGI is helping clients achieve their goals for efficiency and accountability.

- Reduce processing time by incorporating rules-based approval and automated workflow
- Control spending with negotiated price lists; end users take advantage of negotiated prices from easy-to-use cataloguing
- Simplify vendor maintenance with a self-service portal, shifting the maintenance of vendor information and catalogs to the vendors
- Reduce costs by automating routine spending, consolidating purchasing, and creating larger cooperative purchasing opportunities
- Reduce printing and mailing costs, evaluate bids more quickly, and increase the percentage of quotes with online bidding, tracking, responses, email, award and evaluations
- Leverage solicitations for reverse auctions and surplus auctions
- Reduce redundant data entry by generating solicitations, awards, standard orders, service contracts, and blanket orders from the requisition

Built-for-government solution for effective results

With integrated, built-for-government software, and proven, web-based technology, CGI offers government procurement professionals, shoppers, and vendors the comprehensive tools they require to support, facilitate, and transform government procurement. Through this commitment, state and local governments are achieving their goals for efficiency and accountability.

Software

- Enable online invoicing, approvals, and workflow
- Real-time integration to government accounting
- Coordinate insurance, bonds, and warranties
- Manage assignments, terminations, renewals
- Evaluate vendor performance
- Record correspondence with vendors
- Manage team workload
- Monitor procurement workloads
- Reassign procurements, extend deadlines
- Manage complex acquisition requirements
- Manage solicitation, evaluation, award and contract procurements
- Conduct auctions
- Provide vendor registration
- Allow vendors to maintain their profile, goods and services information
- Provide vendor catalogs
- Respond to solicitations
- Electronic publishing and notification
- Provide Diversity Procurement Programs

Results

Increase efficiency

- Reduce redundant data entry
- Reduce data maintenance
- Control spending
- Reduce processing time
- Automate routine spending
- Evaluate bids more quickly
- Escalate approvals automatically
- Enable automatic matching and payment processing
- Negotiate better pricing by leveraging combined spending

Improve reporting

- Track business cycle of requests from initiation to payment
- Provide quick and easy access to organization-wide information that offer critical business intelligence and supports tools such as scorecards
- Track and monitor procurement activity to determine progress against process improvement and efficiency goals

Reduce customization

- Built-for-government functionality
- Configurable user interface
- Rules-based workflow, approvals
- Ad hoc reporting at the user desktop
- Baselined client enhancements

COMPANY PROFILE

For 35 years, CGI has operated upon the principles of sharing in clients' challenges and delivering quality services to address them. CGI has 31,000 professionals operating in 125 offices worldwide.

We deliver built-for-government IT solutions that maximize revenue while minimizing costs. As a full-service systems integrator and managed services provider, CGI has the industry know-how, tools and technologies to address business challenges across the public sector spectrum.

CGI's leading ERP solution, CGI Advantage™, helps state and local governments improve their back office operations and better serve their citizens with a full suite of built-for-government tools including financial management, payroll, budgeting, human resources management, procurement and grants management.
