LandMan

Land and Asset Management

Know-how. Quality delivery. Results you can count on.

With 72,000 professionals operating in 400 offices in 40 countries, CGI fosters local accountability for client success while bringing global delivery capabilities to clients' front doors

For over 20 years, we've served the energy industry, delivering consulting, solutions, systems integration and managed services to over 700 energy clients worldwide. Clients give CGI high marks (9.0/10) for the way we work – in close collaboration, as trusted partners, committed to their success.

CGI's LandMan Suite Land and asset management at its best

The energy industry depends on one important foundation – the land upon which resources are found, developed, produced and ultimately delivered to market. Effective management of the land and associated assets can be the 'make or break' factor in the success of an energy company. To maximize investment revenues, business leaders must have insight and transparency into ownership details.

CGI's LandMan suite of asset management solutions was built specifically to track oil and gas surface and mineral assets. LandMan encourages best practices for land personnel to maintain data integrity and help make staff better land administrators. Additionally, critical information from other applications can be consolidated with land information to highlight gaps in revenue collection.

Executives will appreciate LandMan's seamless flow of critical data from source to the business users who need to make faster and smarter business decisions.

CGI's LandMan suite delivers modules that provide outstanding functionality at a price that offers excellent value to clients from new market entrants to large multinational companies:

- A comprehensive set of **legal survey systems and true structured rights**
- **Unparalleled query and project capabilities** to filter and manage data
- Management of surface use and rights of way incorporates **rates and invoicing for users and partners**
- Quality audits, **automatic linking of records** and extensive reporting
- Support for **deep and shallow rights reversion programs**
- **Link to major mapping tools** and industry accounting applications
- Rental invoice information is generated and formatted to **interface with industry accounting packages**
- Outstanding ability to **generate formatted reports** or ad hoc exports
- Integration and reconciliation modules can be activated with minimal cost and effort, providing a flexible path for growing companies

Projects and Ad Hoc Reporting

- The comprehensive selection and filtering capabilities of the LandMan File Selection Query and Project screens, coupled with powerful ad hoc reporting delivers exactly the right information where and when it's needed. Save it, reuse it, share it, and export it!
- Use projects to limit areas under review – set up divestiture packages, apply code changes to specific records or display project information on map system of choice

Contract or Mineral Driven

- Manage Canadian and US contracts and lands effectively
- Automatically link related files with same legal/rights – edits propagated instantly without accessing each individual file. DOI information can be maintained at the desired level with historical data retained

Surface and Mineral

- Manage land and contracts effectively across North America using appropriate survey systems
- Billings and accounting entries can be generated for multiple operating entities

Access Agreements (Road Use and Crossings)

- Easily use the system to generate master agreements and addenda
- Billing and accounting entries generated for multiple operating companies

Fee Lands

- Exceptional ability to manage Fee Lands; automatically generate mineral leases from the Fee Title record

Well Maintenance

- Data can be interfaced to other well management systems
- Customizable interface uploads PPDM compliant information from third party data sources

Spacing Units

- Designed for company data management; seamlessly integrates with third party records and applications

Units, Facilities and Service Agreements

- Companies that operate units and facilities reap significant advantage implementing these modules as they enable easy management of these complex agreements, associated service agreements and rates
- Wells are automatically linked at the touch of a button via the government unit code. If desired, well information can be updated via data load

Landmate

- Choose from various interface options, custom links and reports

Crown Invoice Reconciliation

- For Canadian companies, LandMan reduces costs by electronically reconciling Mineral and Surface Crown invoices for Alberta, British Columbia, and Saskatchewan

Flexible deployment options

CGI's Landman suits your operating processes, from single desktop systems through to complex server configurations. CGI's ASP software delivery offers a hosted alternative, providing clients with a potential for increased operational efficiency by reducing the demands on internal IT staff. CGI also provides failsafe business continuity with an off-site backup.

LandMan Features
