Partner Data Exchange

Know-how. Quality delivery. Results you can count on.

With 72,000 professionals operating in 400 offices in 40 countries, CGI fosters local accountability for client success while bringing global delivery capabilities to clients' front doors.

For over 20 years, we've served the energy industry, delivering consulting, solutions, systems integration and managed services to over 700 energy clients worldwide. Clients give CGI high marks (9.0/10) for the way we work – in close collaboration, as trusted partners, committed to their success.

CGI's Partner Data Exchange – PDE Better connections...better decisions

In the oil and gas industry, joint-venture partnerships are formed to realize the benefits of a strong alliance and reduce economic risk. By entering into a joint-venture agreement, companies bring to bear combined resources and expertise, creating a strong union of experts with common goals. To be successful, the partnership must be well-defined and include regular, accurate sharing of progress and results.

CGI's Partner Data Exchange (PDE) provides joint-venture partners with an industry-leading solution that sends and receives critical data to enable smart, timely decision-making about shared oil and gas management. PDE's web-based, fully automated tool reports on every aspect of the operations lifecycle, including production, well specification, meter and chart transactions, transport and gas analysis.

With PDE on your side, sharing information is made easy, allowing you to focus on growing your business.

CGI's Partner Data Exchange Solution delivers:

Benefits for senders...

- **Complete automation of data transfer** between the operator's system and non-operated partners
- **Zero cost to send** data to PDE; receivers pay for data only when it is downloaded
- **Elimination of manual data entry**
- **Online viewing** of data
- **Multiple options and file formats** for data viewing and reporting

Benefits for receivers...

- Increased **ability to track sending and receiving** of data and files
- Access to **online reports** and option to view or download
- **Truck Tickets Production Accounting** module provides specific transport information
- **Elimination of manual data entry** into CGI's Production Volume Reporting (PVR) solution or other field data capture (FDC) application
- Self-administration allows partners to **manage user accounts and passwords** on the PDE website
- **Role-based access to data** each user needs

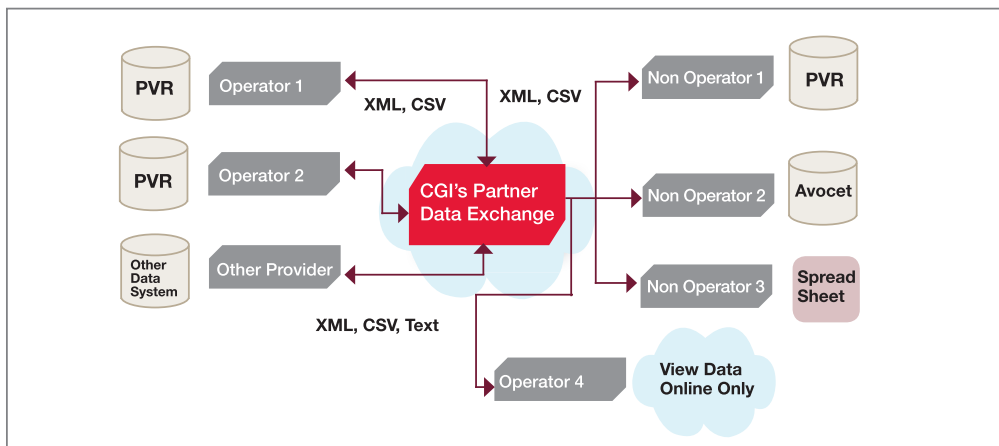

Built on a solid foundation

Hosted by CGI in a 24 x 7 data center using proven Microsoft technology, the PDE Hub is built on an integration platform that acts as a secure, central administration center for straight-through data processing, transformation, publishing and routing. The Hub controls and directs the flow of production data transactions between partners and has the intelligence to react to events as they occur, particularly important in automated and “hands-free” processing environment.

Your partner in implementation

For each PDE implementation, an experienced CGI team member guides each partner every step of the way, from technical set-up to end-user training. Additional services can include the set-up of ownerships in PVR, receiver/non-operator name conversions and creating a non-operator distribution fax list at the PDE processor. CGI also offers many other PDE support, service and administrative options to reduce demands on internal staff.

PDE Features

COMPLETE, COMPREHENSIVE, FLEXIBLE

- 100% automated for users of a supported FDC
- Secure encrypted data transfer built on Hub
- Alerts, acknowledgements, error handling
- On-line user administration and document tracking
- CGI dedicated exchange administration
- Data transformation capabilities
- Structured file uploads / downloads for non-FDC users
- Print-friendly, query-based web-views of non-operated production data

At CGI, we're in the business of satisfying clients. We operate upon the principles of sharing in our clients' challenges and delivering quality services to solve them.
