Production Volume Reporting

Know-how. Quality delivery. Results you can count on.

With 72,000 professionals operating in 400 offices in 40 countries, CGI fosters local accountability for client success while bringing global delivery capabilities to clients' front doors.

For over 20 years, we've served the energy industry, delivering consulting, solutions, systems integration and managed services to over 700 energy clients worldwide. Clients give CGI high marks (9.0/10) for the way we work – in close collaboration, as trusted partners, committed to their success.

CGI's Production Volume Reporting – PVR Powerful field data management that grows with you

In today's competitive marketplace, oil and gas company executives understand the need to make better, smarter decisions about which direction to take their business. Accurate and timely access to production volumes is required, and manual spreadsheets or home-grown databases no longer fit the bill. Large or small, companies need volume data that connects everyone – from field operations to the front office.

CGI's Production Volume Reporting (PVR) solution is the leading production management system on the market today, offering companies an efficient means of collecting, compiling and reporting field data. Our clients leverage PVR for their business because they consider it the most comprehensive, powerful and scalable field data capture system available.

As a single source of trusted data, PVR provides oil and gas producers with the right information at the right time so they can manage their business today and be strategically positioned for the future.

CGI's Production Volume Reporting Solution delivers:

- The **most widely used** field data capture system in the Canadian oil and gas industry
- An **easy-to-use, flexible solution** that integrates easily with other mission-critical applications to create a complete and near-real time picture of business performance
- Access to data from any geographic location to make **informed business decisions** and **increase productivity**
- **One-click** data import and export process
- Access to over **300 standard reports**
- An **open development process**, where users determine the priority of future enhancements and features.
- **Failsafe business continuity** with off-site backup

Connect and share data

The PVR solution is part of the overall CGI Production Management Suite of applications that provide an interface between field operations and the front office. The applications in the PM Suite – PVR, Gas Facility Reporting and our Contract Nomination System – are integrated through the use of a data interface, a standardized API and data extraction layer that eliminates direct calls to the back-end database.

The Data Interface module makes it easy to import or export production data into and out of PVR. Using your predefined definitions, the interface verifies file content and format and, with one click, imports the data directly into your production management database. Exporting is easy too. A profile, customized to be as specific or as comprehensive as you need, identifies the data for export. Click the export button and the data is presented to you for reporting and analysis.

A wide variety of deployment options

From single user systems to complex server configurations or even remote access, CGI's PVR has the flexibility to meet your specific needs. Or, as an alternative to client managed and resourced client/server installations, CGI offers a hosted alternative. Many clients select this option to achieve increased operational efficiency by reducing the demands on internal IT staff.

PVR Features

COMPLETE, COMPREHENSIVE,
FLEXIBLE

- Allow virtually any data item required for field data capture through comprehensive master files
- Protect corporate production data by securing access to hierarchical records
- Establish a reporting hierarchy to determine levels of summary and detailed information through the PVR master files
- Leverage the PVR Wizard for the quick creation of custom reports and graphs
- Quickly distribute custom reports using any MAPI-compliant mail system viewed by the PVR report viewer
- Access knowledgeable support through classroom training, help desk and online e-learning

At CGI, we're in the business of satisfying clients. We operate upon the principles of sharing in our clients' challenges and delivering quality services to solve them.
