

CGI Meg

Information is power. As a fleet owner or operator, you may be challenged in effectively keeping track of the whereabouts of your vehicles, whether they're buses, trucks or cabs. You might be entirely dependent on your driver for location information. Wouldn't it be great if you could independently keep track of and know the exact location of your fleet at any time? This would give you more control over your fleet. You could manage your business more efficiently and realize more benefits through more optimized resources.

GET EXACT INFORMATION ANYTIME, ANYWHERE

CGI Meg provides accurate, real-time information on your fleet, giving you complete control. A simple SMS from your mobile phone provides the exact location of your vehicle, wherever it is. You can even receive SMS alerts and recorded call-backs on vehicle location.

As you better manage your fleets, your drivers will become more vigilant. You can track fuel consumption and ensure there are no detours in the routes. You also receive alerts in case of delays or route deviations. More importantly, you can track your vehicle in case of theft. Also, certain vehicles can be tracked by only authorized personnel, thus ensuring complete privacy.

Your customers are also happier because they can get real-time information on their loved ones or goods by simply sending an SMS.

How does it work?

CGI Meg works in tandem with a device that is added to your vehicle as part of an intelligent back-end application. This device transfers real-time location details to the application. When you send an SMS from your mobile phone, the request is transmitted via satellite to the application, which retrieves the exact location information and sends it back to you via SMS.

How do you benefit?

As a fleet operator or owner, CGI Meg offers you better operational, time and cost efficiencies. It helps you build important value-added services for improved customer intimacy and loyalty.

Parents can now rest assured when it comes to the whereabouts of their children on school buses you provide. Other people using your buses can know the buses' exact location and time of arrival. Corporate offices can provide safer

FACT SHEET

KEY BENEFITS

- Tracks vehicles anytime, anywhere in real time
- Available as part of an SaaS model; cost effective and simple to use
- Increases utilization of network infrastructure (SMS and data communication) for network operators
- Improves operational efficiency, safety and security
- Opens more revenue channels through value-added services to customers

transportation to employees. Manufacturers, retailers or raw material providers can keep a tab on their dispatches without bothering you.

As a network provider, you can explore revenue opportunities through value-added services, without making additional investments. You benefit monetarily, as much as customers benefit, every time an SMS is sent. And, you can benefit from all of this while optimizing your existing network infrastructure.

CGI Meg is provided via an SaaS model, making it all the more cost effective and convenient. Simple and efficient, CGI Meg enables numerous business models and value-added services to be built around it. It benefits all in its ecosystem, including fleet owners and operators, mobile network providers and end-users.

WHY CGI?

CGI makes technology count for our clients by increasing operational efficiencies and optimizing resources. This is what we aim to do with CGI Meg. We help you increase management efficiency, build customer loyalty, and explore more business opportunities as you differentiate yourself from competitors.
