SACWIS Solution

The nation's SACWIS leader

CGI is committed to helping clients build innovative technology systems that support, inform and improve child welfare services delivery. This commitment has led to national recognition for having the most transferred and rewarded child welfare system available today, including awards from the National Association of State Information Resource Executives, the Center for Digital Government and APHSA-ISM. More states choose CGI for SACWIS solutions than any other provider.

Implementation

- Alaska
- Connecticut
- Florida
- Illinois
- New Jersey
- New Mexico
- Rhode Island
- Wisconsin

Planning, design and architecture

- Alabama
- Arizona
- Louisiana

The investment choice that helps caseworkers keep children safe

Building a new SACWIS system may be the most significant IT investment that a child welfare agency makes. The goal: create a federally compliant system that helps caseworkers keep children safe. The challenge: meet stakeholder needs and wants with a stable, proven application.

- IT staff demand a cost-effective system that's easy to operate, integrate and maintain.
- Financial staff want a system that provides accurate and auditable service and payment data.
- Administrators and managers require effective child tracking and detailed outcome reporting.
- Caseworkers need an easy-to-use system that lets them spend maximum time with children and families.

The answer: CGI's SACWIS solution. CGI meets these needs and more through a technically advanced and proven web-based system.

The right partner, the right choice

More than 18,000 users depend on CGI SACWIS systems every day. Key features of the solution include:

- The largest, most experienced team of SACWIS experts, knowledgeable in both the technical and operational requirements of the solution
- A highly adaptable J2EE architecture that enables seamless transfer from state to state
- A proven, low-risk implementation approach that draws upon our successes and the body of knowledge gained through partnership with multiple states

The CGI SACWIS application is an open, vendor neutral web-based solution built on open standards and open source. Every line of our application has been developed and optimized to function on the Web. The CGI solution also operates in a service oriented architecture (SOA), with core system components following the standard web services protocols. Our open source, scalable technology platform provides for your needs today while accommodating for future growth and change.

Our web-based solution has a cumulative total of 50,000+ production hours in Wisconsin, New Jersey and Alaska. In Wisconsin alone, our system has processed more than 60 million production transactions, and has distributed over \$800 million dollars in payments to child welfare service providers. And, most importantly, the system has never experienced an unplanned outage.

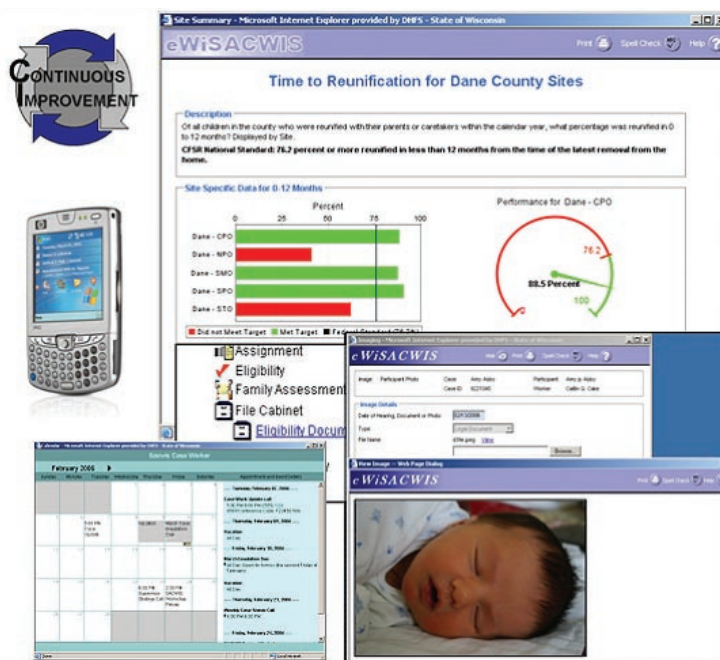

The investment choice that helps caseworkers keep children safe

The caseworkers' choice

CGI takes an active approach to listening to our clients to fully understand their needs and requirements. That's why we consider the approval of caseworkers to be the most important recognition we receive. Caseworkers appreciate the system's easy-to-navigate design, rich features, and support for best practices. CGI's SACWIS solution's continuous improvement reflects their valuable feedback and advice.

- Calendaring links to help manage caseworker time
- Digital image storage through the online file cabinet feature
- Mobile Worker portable computing extension to provide the flexibility and power of SACWIS in the field
- Reporting capabilities to fully comply with SACWIS requirements
- Integrated database to present service, expenditure and client statistical data, assisting such activities as budget monitoring, planning and program administration
- Outcome Measurement Digital Dashboard to provide intuitive, easy-to-understand views of the state's performance against federal outcome measures

CGI's SACWIS solutions are used by 18,000 caseworkers every day. With their input, the system continuously evolves to provide the most technically advanced automated support to achieve child permanency, safety and well-being.

Committed to results

Founded in 1976, CGI is one of the largest independent IT and business process services companies. CGI combines in-depth government expertise with end-to-end services to help human services organizations transform their operations to achieve service and policy goals that make a difference in people's lives.

With more SACWIS solutions in production than any other provider, CGI delivers a stable and proven solution that achieves results.

- More time spent with children and families—less on paperwork
- Quicker intakes
- Accelerated service delivery
- More effective allocation of agency resources
- Improved reporting accuracy
- Enhanced accountability for staff and providers
- Up-to-date lists of available services at users' fingertips
