CGI Edge™ Rating

YOUR EDGE FOR RATING AND DESIGN

Bring Efficiency to your Rating Needs

With CGI Edge Rating, you can bring the rating to any user, anywhere – improving efficiency and allowing your users the maximum in flexibility.

Components

- Designer workstation
- Table builder
- Algorithm builder

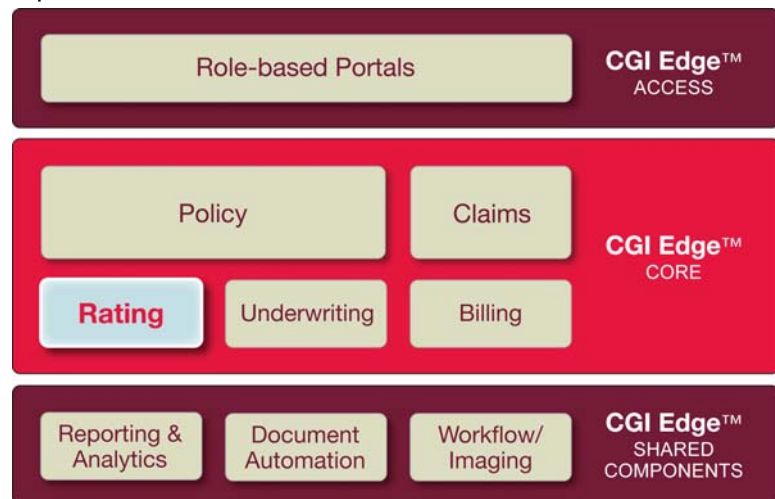

About CGI Edge

CGI Edge is a robust, flexible insurance administration system offered by CGI on both a licensed and application service provider basis. CGI Edge provides modules for managing policy, claims, premiums, reinsurance, commissions and producers for all facets of the property/casualty industry.

LEADING-EDGE TECHNOLOGY WITH BEST-IN-CLASS FUNCTIONALITY

CGI Edge™ Rating provides a winning combination of leading-edge technology with industry-recognized best-in-class functionality. Using the CGI Edge Rating component, you can easily adapt to the changing marketplace, promote efficiency in your environment and put powerful tools in the hands of your users.

CGI Edge™ Policy offers powerful, user-friendly functions for the full lifecycle of a policy. As its integrated rating component, CGI's Edge Rating provides powerful configuration features allowing you to readily adapt to the marketplace. The components work together seamlessly to make your processing more efficient, accurate, and productive.

Benefits

- Improves your speed to market by reducing turnaround time to make changes, update rates and add new products or states.
- Reduces your reliance on technical staff for rating changes, since the rating configuration can now be done by a business user with appropriate training.
- Minimizes rating errors with built-in edits and real-time, on-line rating.
- Allows your business to respond to changing business conditions and regulatory changes by deploying rule and rate changes same-day.
- Consolidates all rate changes into a single source, ensuring consistency of rating for both your agency force and your in-house personnel.

System Components:

Rating

CGI Edge™ Rating is an object-oriented rating workstation that lets business users create, build, and test the rating procedures and tables used by your company. The rate tables are stored in a database, making it easy to add new tables or change existing ones, and deploy them quickly to your agents and policy processors. Our easy-to-use Algorithm Editor makes it easy to change the steps used to rate a policy.

The rate designer workstation facilitates rating design, development, testing, and deployment into one package with a server component that creates the production run-time environment. The solution supports an unlimited number of rating and rating algorithm versions. Algorithm and table versions are available by line of business, company, product, state, new business effective date, renewal effective date, and creation date.

Other productivity features include an integrated regression testing and visual debugger, an integrated data dictionary, and the ability to quickly import your rating tables from outside sources such as Excel spreadsheets.

Tables

The tables used by CGI Edge Rating are stored in a database. You can add new tables and or change existing tables using Table Editor. Changes to the tables can be made at any time, even while users are in the system actively rating policies.

CGI Edge Rating provides unmatched flexibility for your rating. In addition to the normal table lookup mechanisms, it offers a Smart Tables capability that allows you to interpolate and extrapolate rates automatically, perform a range look-up, and determine when to use a default value—all with no programming.

Algorithms

Algorithms are the sequences of steps required to rate a policy. CGI Edge Rating's Algorithm Editor provides an easy-to-use, point-and-click environment that can be used by both technical and business users. CGI Edge Rating encourages efficiency and reuse, by allowing you to set up common algorithms that can be used across a the system. Just like tables, algorithms can be distinguished by line of business, company, product, state, and several different dates.

Rating templates

Each rating template includes a standard-based set of algorithms and tables for each line of business. In many cases, the template rating algorithms can be used as is, and only the rating tables need to be updated with your company's rates. If adjustments to the template are needed, the Rating Designer makes the process fast and easy.

Operating environment

CGI Edge is an n-tier, service-based solution. The rich, browser-based client runs on any operating system supporting Internet Explorer 6 or 7. The web/application server runs on Windows Server 2003 and IIS6. Oracle 10g is used in the data tier.
