Production Management Suite

PROVEN PERFORMANCE

At CGI, we're in the business of satisfying clients. For more than 30 years, we've operated upon the principles of sharing in our clients' challenges and delivering quality services to address them. A leading IT and business process services provider, CGI has approximately 26,000 professionals operating in 100+ offices worldwide.

In the oil and gas sector, CGI partners with approximately 450 oil and gas clients. Features of our PM suite include:

- Industry standard field data capture application that is easy to use, learn and deploy
- Provides quick and easy access to accurate daily and monthly oil and gas production information
- Manages operations and production data from any geographic location in near real-time
- Integrates PVR with other mission-critical applications like production accounting and land to create a complete and up-to-date picture of your business performance
- Utilizes specific components of the CGI PM suite, such as our Gas Facility Reporting module (GFR), to meet broad business requirements

EFFICIENTLY COLLECT, COMPILE AND REPORT FIELD DATA

Without current and accurate access to critical asset performance and insights, fast and smart business decisions cannot be made, paralyzing growth. Enter CGI's Production Management Suite (PVR, GFR, CNS). The most widely used field data capture system in the Canadian oil and gas industry, the solution suite enables clients to make informed business decisions and increase productivity with easy access to daily production information.

ABOUT THE PM SUITE

CGI's PM Suite is the leading production management system on the market today, offering progressive companies an efficient means of collecting, compiling and reporting field data. The system provides both field operators and office personnel with an intuitive, comprehensive and easy-to-use tool.

The CGI Production Management (PM) Suite is a suite of applications that perform the role of interfacing field operations with the head office personnel of oil and gas companies.

The suite includes the following modules:

Production Volume Reporting (PVR)

Whether staff manage operated or non-operated properties, PVR makes the business processes and the workflow associated with operations data collection more efficient. The value proposition of single-source information offered by PVR helps companies manage their business easily every day, while positioning them strategically to build for their future.

Gas Facility Reporting (GFR)

GFR assists plant operators with the daily management of gas plant data and product allocations. GFR eliminates cumbersome spreadsheets that track monthly and daily facility balances, product allocations and facility utilization by client companies.

Contract Nomination System (CNS)

CNS provides for the daily management of contracts and prepares transport estimates.

Heavy Oil Module (HVO)

The HVO module addresses the specific needs of heavy oil operations, including the ability to manage cleaning plants, disposal caverns, advanced truck ticketing, single well batteries, thermal wells (including SAGD operations) and fuel gas networks.

ABOUT THE PM SUITE (CONTINUED)

Data Interface Module

The applications in the PM Suite are “integrated” through the use of a data interface, a standardized API and data extraction layer that eliminates direct calls to the back-end database.

The Data Interface module makes it easy to import or export production data into and out of PVR. Using the predefined definitions, it is easy for you to verify the file content and format. Then, with one button pressed, you can import the data right into the PM database. To export data from the PM database, you first create an export profile where you identify the entities with the data that you want to export. You can customize each profile so it's as specific or as comprehensive as you need. Then you select the predefined export profile for the data, the file location and name, the date range and click the export button.

PARTNER DATA EXCHANGE (PDE)

CGI's Partner Data Exchange (PDE) is an industry-leading data exchange environment, enabling companies to seamlessly exchange production and well spec data with their joint-venture partners. Whether you are a CGI PVR (Production Volume Reporting) client or you are using another Field Data Capture (FDC) application, PDE allows for the complete automation of data transfer between the operator's system and non-operated partners' systems. The benefits and functionality of this innovative CGI solution are extended to non-FDC users through the PDE's ability to upload or download structured files and to view and print Web views of production data. This allows our clients to exchange production data with “all” of their partners.

DEPLOYMENT – ASP OR CLIENT-PREMISE

CGI's PM Suite offers a wide variety of deployment options to suit your operating processes, from single user systems through to complex server configurations or even remote access. As an alternative to client managed and resourced client/server installations, CGI offers a hosted alternative. This option provides clients with increased operational efficiency by reducing the demands on internal IT staff in supporting land applications and providing failsafe business continuity with an offsite backup.

COMPLETE, COMPREHENSIVE, FLEXIBLE

- Allow virtually any data item required for field data capture through comprehensive master files
- Protect corporate production data by securing access to hierarchical records
- Establish a reporting hierarchy to determine levels of summary and detailed information through the PVR master files
- Access over 300 standard reports
- Leverage the PVR wizard for the quick creation of custom reports and graphs
- Quickly distribute custom reports using any MAPI compliant mail system viewed by the PVR report viewer
- Access knowledgeable support through classroom training, help desk and online e-learning when needed
