In a complex economic environment, the search for organizational efficiency requires continuous innovation when it comes to work methods. An organization's success depends on the quality of its employees' work environment and the accessibility of its information and knowledge. At the heart of its strategic approach is information technology, which centralizes and manages information while increasing employee productivity for improved strategic decision-making. Investing in a technological solution that impels the company to review its business processes is a significant challenge that requires expert assistance and coaching.

Working in synergy with your team

As a Microsoft Certified Gold partner and member of Microsoft's Patterns & Practices Group advisory board, CGI understands this challenge and is well positioned to offer effective and innovative solutions that respond to your current needs and specific expectations.

Our team of certified SharePoint specialists makes achieving your business objectives a priority. Our flexibility and speed make us a reliable partner—one that approaches your project with professionalism and diligence.

The solution

Microsoft Office SharePoint Server is a first-class business solution in terms of **portals, collaboration tools, automated processes** and **content management**. A highly customized tool, SharePoint can be deployed quickly and with a high degree of interoperability.

With CGI and SharePoint, clients achieve the following benefits:

- Connect the organizations' users, teams and knowledge at all levels of collaboration by providing a simple, familiar and homogeneous environment
- Improve productivity and simplify day-to-day activities
- Adopt a centralized information management tool that facilitates ongoing, compliant updates across your organization.
- Access business data according to specific security criteria to assist with strategic decision-making

A proven and effective approach

CGI's team of SharePoint specialists uses an effective approach that has been proven during various types of projects. From the project launch through to complete installation of the solution, our approach takes into account your business strategy at every step of your solution's development.

- **Definition:** At this stage, we work with you to define the vision that will guide your project. This phase, which establishes the "what" of the project, accurately identifies its scope and technical direction, as well as the project and quality assurance plans.
- **Development:** This phase addresses the "how" of the project: The CGI team collaborates closely with your IT team and the business lines to define your project's needs and requirements. Our analysts capitalize on an iterative approach that enable the client to validate the system to be delivered early on in the project's lifecycle.
- **Construction:** This phase encompasses all of the development and test activities designed to ensure that the development is compliant with the system specifications. The main activities of this phase are installation, configuration and customization of the various SharePoint components as well as the development of custom components to meet your organization's specific needs.
- **Transition:** This phase consists of the transition from the solution's development to its deployment. It is during this phase that we take corrective actions to address the possible anomalies, prepare the deployment plans, and conduct the skills transfer, as well as train users and the team handling the system's evolving maintenance.
- **Operation:** During this coaching phase, we will follow up with you regarding management of the applications supported by the platform to ensure operational efficiency.
- **Evolution:** This stage involves the optimization of the solution. It relies on statistics on the application's use and site visits, which are generated by performance management tools.

Achieving your goals with CGI as a partner

With CGI, expertise becomes the source of a profitable partnership. Not only do we offer you peace of mind when it comes to your choice of IT solution, our partnership provides for a successful transition and continuity, while advantageously positioning you for the future.

Company profile

At CGI, we're in the business of satisfying clients by helping them win and grow. For more than 30 years, we've operated upon the principles of sharing in clients' challenges and delivering quality services to address them.

As a leading IT and business process services provider, CGI has a strong base of 26,000 professionals operating in more than 100 offices worldwide, giving us the competitive advantage of close proximity to our clients. Through these offices, we offer local partnerships and a balanced blend of global delivery options to ensure clients receive the optimal combination of value and expertise required for their success.

We define success by helping our clients achieve superior performance and gain competitive advantage.

CGI's Microsoft clients

CGI has domain expertise in many industries, including the public sector, financial services, communications and manufacturing.
