

Utilities ARM Performance Manager

ARM PERFORMANCE MANAGER OFFERS A TRUE PICTURE OF THE ENTIRE ENTERPRISE.

THE CHALLENGE

- Make informed decisions from your operational data
- Eliminate organizational and technology silos and multiple ad-hoc reporting mechanisms providing a single truth
- Present a holistic view of work, assets and resources utilizing your existing Business Intelligence reporting and dashboard infrastructure
- Monitor performance and expectations
- Analyze the root cause of negative trends
- Improve efficiency
- Reduce operating costs.

OUR ANSWER

CGI's Performance Manager is a component of the industry leading Asset & Resource Manager (ARM) product suite. It accurately collects, analyzes and provides data to improve decision-making, reporting and performance of resource and assets.

A low-impact business intelligence tool, Performance Manager will extract, transform, load (ETL), cleanse, summarize, aggregate and cube data from ARM data sources with very little operational overhead. This information helps establish realistic measures and targets. It offers a framework to identify trends and their causes.

Performance Manager's Data Warehouse and Data Marts provide views of data based on organization, work types and time segments. Dashboards track key performance indicators and transform data into actionable insight. The latest embedded Oracle technology is used to extract, transform and load your ARM and non-ARM data sources into the enterprise database platform of your choice, providing "out of the box" access to a range of KPI's and metrics we know utility companies require for operational efficiency and regulatory compliance. You select the criteria. Performance Manager does the work.

With standardized reporting and metrics that spans the enterprise; you monitor the entire workflow process. From work initiation to design, through scheduling, completion and closing, Performance Manager empowers decision makers from the executive to the front-line manager. Compatible with diverse legacy systems, Performance Manager is pre-integrated for the ARM Suite of Work, Asset, Resource, Field and Scheduling solutions.

KEY BENEFITS

- Technology agnostic ETL
- Real-time data refreshes
- Accurate insight
- Flexible deployment
- "Out of the box" metrics and KPI's
- Operational reporting
- Open dashboard and reporting architecture.

ABOUT CGI

With 69,000 professionals operating in 400 offices in 40 countries, CGI fosters local accountability for client success while bringing global delivery capabilities to clients' front doors.
