

REACH Compliance Solutions

THE CGI WAY

CGI is a full service IT and managed services provider with focused industry expertise and innovative service models that help clients achieve their business goals. From optimizing operations and enhancing performance to improving customer service and increasing competitive advantage, leading organizations count on CGI's systems integration services and IT consulting to transform their business processes and apply emerging technologies to advance their business goals.

With talented professionals, broad capabilities and a flexible approach, CGI can help you define the strategies and evaluate, design, develop and implement the systems and processes that best achieve REACH compliance. An end-to-end provider, CGI has hands-on experience and deep EHS and IT expertise, enabling us to not only consult but to implement and manage REACH IT solutions.

CGI uses a flexible, tailored approach to providing REACH services and IT solutions. We structure each relationship to meet our client's unique business goals and build in flexibility to meet current and future needs. To each client relationship we bring quality and a delivery track record, flexible and accountable partnerships, and industry depth and expertise.

REACH LEGISLATION

REACH (**R**egistration, **E**valuation, **A**uthorization and **R**estriction of **C**hemical substances) is a European Community Regulation on chemicals and their safe use and is considered the most ambitious chemical legislation that has been enacted anywhere in the world. The new law entered into force on 1 June 2007 and requires the registration over a period of 11 years of some 30,000 chemical substances that are in use today. The law transfers responsibility for the generation of safety data about chemical substances from regulatory authorities to industry.

Introducing CGI's REACHMate Software Solution

The REACH regulation requires you to manage more information than ever about the chemicals your business produces and how to use them safely. Recognizing that you need resources for meeting REACH regulations and associated documentation, CGI collaborated with industry leaders to develop the **REACHMate** software tools.

REACHMate provides a single resource that enables you to bring together quality data from multiple sources. Our software will help you streamline how you track and report required exposure scenario/risk management measures about your products to earn and maintain REACH compliance. This comprehensive, flexible and intuitive software can be integrated with your existing SDS Authoring Solution.

The CGI REACH Toolset delivers key benefits for your business:

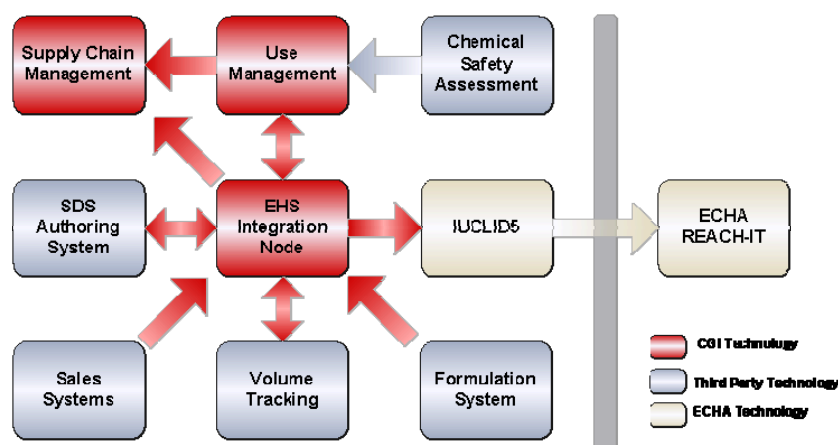

Streamlined reporting - Our software does the work for you by interfacing with your SDS authoring system to identify REACH products. The toolset maintains and reports REACH data for every required product.

Data consistency - **REACHMate** helps you decide where you house your authoritative data (including IUCLID5, use management, authoring system) and to synchronize data across applications via a common data integration node. You get direct access to the right information without the risks of additional data entry.

Flexibility - Because your customers have different needs, **REACHMate** offers you flexibility in how you publish exposure scenarios on your Safety Data Sheets (SDSs) when you ship chemicals or substances. Our toolset captures this information at both the substance and product level.

Easily updatable - Recognizing that REACH regulations are likely to continue to evolve, the toolset is designed to accommodate easy and quick interface updates without requiring software releases.

REACHMate is a comprehensive and flexible solution that integrates with your third party systems.

REACHMate consists of the following components:

EHS Integration Node

At the operational center of REACHMate is the **EHS Integration Node**, which supports the exchange of data to and from each integrated system. A web-based front end provides administrative capabilities to monitor interfaces and assist with building additional interfaces beyond the core set provided. The ability to maintain interfaces within the Integration Node allows our toolset to flexibly respond to changes in third-party systems, such as IUCLID5, without software releases.

Use Management

Use Management manages how you document the use of regulated chemicals and their exposure scenarios for safe usage. This web-based software provides an easy resource both for registering new substances and for communicating appropriate information on the eSDS.

Supply Chain Management

Supply Chain Management manages and communicates REACH registration data across your supply chain. Combining a simple and customizable user interface with a robust template and rules-based communication engine, this solution allows you to quickly provide registration information to your customers and coordinate responses to your suppliers in order to assure compliance with REACH.

Interfaces

You can integrate third-party systems with REACHMate to manage the access and/or transfer of data among systems. Interfaces include: IUCLID5, Formulation systems, Authoring systems Interface, Volume tracking systems Interface.

COMPANY PROFILE

Key statistics

- Founded in 1976
- Approximately 26,000 professionals
- More than 100 offices worldwide
- One of the largest independent IT and business process services companies
- NYSE: GIB — TSX: GIB.A

End-to-end services

- Consulting
- Systems integration
- Management of IT and business functions
- 100+ proprietary business solutions
