CGI AgileEnergy360

E xploration and production companies are focusing their IT priorities to become more agile and reduce the cost of "run" to "invest in change." Embracing delivery models such as business process outsourcing (BPO) and IT outsourcing (ITO) are key enablers for aligning cost with revenue.

To help address these forward-looking priorities, CGI helps clients design, build and deliver integrated business solutions across the entire exploration to revenue value chain. We can manage your back office so you can focus on your core business and strategic initiatives, such as operational efficiency and M&A activities.
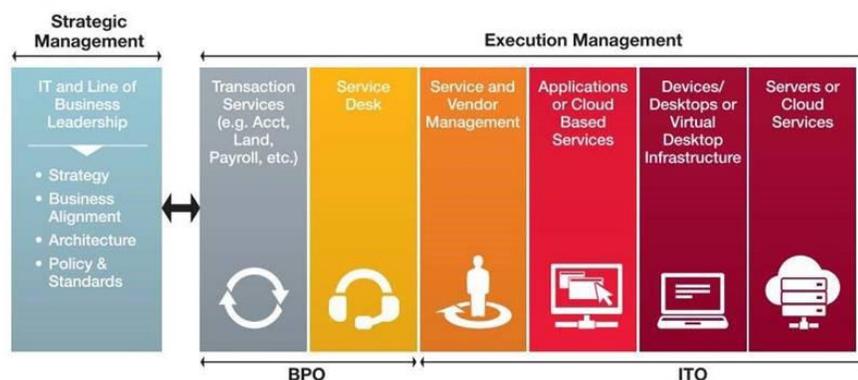

Whether you seek to respond to pricing pressures, optimize use of available funds, or gain a business advantage through innovation, our agile energy solutions support your business goals.

CGI AgileEnergy360 strategically integrates BPO and ITO services to improve business processes through the effective use of technology, including scalable, customized solutions to fit your specific needs. We deliver industry-specific capabilities focused on true mission advantage, while reducing costs, managing risks and improving service to end users.
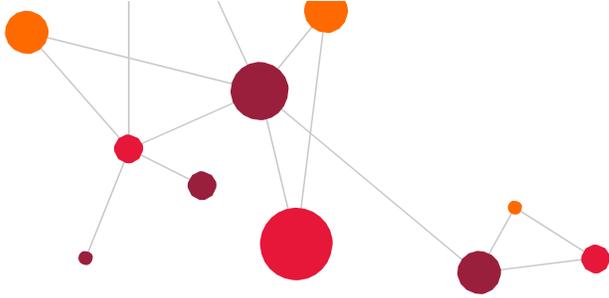

KEY BENEFITS

- Increase efficiencies from operations to procurement, driving down costs
- Extend and create new functionality to grow solutions with the business
- Increase transparency to execute faster and make smarter decisions
- Reduce delivery risks with rapid deployment in a secure environment
- Realize more predictable costs, better service and increased flexibility
- Build better and more accurate production planning
- Convert CapEx IT costs to OpEx and spread costs over multi-year agreement

In this model, CGI takes responsibility for non-core functions such as transaction services—accounting, land administration, human resources, regulatory and contracts—as well as key supporting IT functions such as service and vendor management, application services, devices/desktops, servers and IT facilities). We also implement the leading financial and operational systems needed to run an E&P company. Systems can be CGI's X2R Business Suite for the upstream back office or from our partners and clients.

Clients benefit from oil and gas industry-specific expertise focused on the mission and the governance to realize process improvements. Turning operations over to a proven and trusted partner allows clients to rethink how to manage the convergence of production, engineering and financials across the business, from the c-suite to the field. This includes identifying opportunities to extend and create new functionality to grow solutions with the business.

CGI AgileEnergy360 also includes:

- Best practices in onboarding to help ensure acquisitions align with existing business processes and systems to minimize disruption.
- Industry-leading applications to make it easier to integrate with partners and other applications.
- Secure, cloud-based delivery to make it easier to scale up or down as needs change.
- Dashboards providing a holistic view into back-office and IT operations to better manage costs and performance.

Expert BPO

CGI provides a full range of accounting and minerals management business process services—including applications support and management, as well as service desk—that have been proven to reduce client staffing costs by 15%. CGI also provides business process outsourcing services for the administration of production accounting. Our BPO professionals have an average of 17 years of oil and gas industry experience.

Robust ITO

IT outsourcing is a core competency of CGI and a key business enabler for our clients. Founded on an outcome-based model, our IT outsourcing services deliver efficiency improvements and cost savings, allowing clients to reinvest and drive their business transformation.
