Ratabase

Pricing and product innovation are key to success for insurance carriers in an increasingly disrupted marketplace. Ratabase drives both, putting the best tool in your hand for changing your pricing and products as fast as the market demands.

THE “GOLD STANDARD” IN INSURANCE RATING

With more successful installations than any other solution in the industry (100+), CGI’s Ratabase is the premier rating and rules engine in insurance today. Ratabase is a rating and product configuration solution that enables insurance agents and consumers to generate policy price quotes in real time. It provides actuaries and business analysts with a collection of sophisticated modeling tools to keep pace with the latest marketplace trends and pressures in determining insurance rates.

Ratabase helps insurance carriers:

- **Save:** Reduce the effort and cost to maintain rating and rules
- **Sprint:** Move your business from “a walk to a run” by speeding time to market and quickly pivoting to meet changing conditions
- **Simplify:** Build once and deploy to any environment—Cloud, Windows, Midrange or Mainframe
- **Spark:** Innovate with a rating engine that can handle any pricing scenario, no matter how complex

BUILD ONCE, DISTRIBUTE ANYWHERE, CONNECT TO ANYTHING, ADOPT ANYTIME

POWERFUL, AWARD-WINNING

- XCelent Award recipient for functionality, customer service and client base
- 30+ years serving the insurance industry
- Partner with 12 of the top 20 global insurers
- 100+ live implementations
- Sub-second response time per rating request (~1,000 transactions in less than 5 seconds)
- Process 60% of GWP in U.S. alone
- Clients have experienced:
 - 75% improvement in days to implement changes
 - 50% reduction in staffing needed to support rating

“It is rare for a vendor to win an XCelent award, and rarer still for a vendor to win more than one award. CGI’s Ratabase product won an unprecedented three XCelent awards in this year’s review of rating engines.”

- Karlyn Carnahan, Celent Property and Casualty Research Director

Product Builder

Actuarial, pricing and product development specialists use Product Builder to identify, build and test formulas, rules and tables used to rate and price your business. Featuring a streamlined workflow and intuitive interface, Product Builder clients have reported up to 75% improvement in days to implement changes and a 50% reduction in staffing needed to support rating.

Production Calculator

The Production Calculator provides the power and capability to rate policy transactions in real time at the sub-second level. It is a multi-platform (Linux/Windows/Midrange/Mainframe), highly scalable and highly reliable performance engine with flexible on-premise or public/private/hybrid cloud deployment models. The Production Calculator has multiple integration options and has been integrated with many policy administration, quoting, pricing and agency management systems.

Apps and Utilities

EMMA (Environmental Monitoring & Management)	App that integrates Ratabase with a DevOps continuous delivery pipeline and supports IT audits by validating deployments and monitoring system performance
Distribution	Utility that packages rating products developed in Product Builder for deployment to one or more runtime environments; distribution format is compatible with all Ratabase runtime environments
Load	Utility that loads deployment packages produced by the Distribution utility into a runtime environment
Output Designer	Rich suite of features for designing and maintaining professional output pages using table and formulas built by the business user through Product Builder; aids in regulatory compliance by producing materials for submission to state insurance regulators
Data Validator	Service/API that enables rate tables to be accessed by other systems; helps eliminate duplicate data entry, improving quality and consistency; enables Ratabase to serve as a Reference Data repository; uses the robust versioning capabilities of Ratabase to support reference data across products, geographies and time
Reports	Tool that allows users to select data and produce reports for table, formula and field data; available in both Product Builder and Test/Production in multiple output formats; can be used for comparison, audit, retention, or compliance purposes; powerful as an integration, coordination and validation tool
Distribution Import	Tool that allows fields, tables and formulas from one Product Builder database to be imported into a separate Product Builder database; enables rate makers to build upon existing rates and formulas for modeling, testing, new product development and other purposes
STEPS Viewer	Easy-to-use graphical interface for viewing output from the Calculator to show how a particular premium was calculated and for quickly drilling down to the particular calculations and table retrievals of interest
WSDL Generator	Application that speeds integration to Ratabase by providing the interface specification in a WSDL (Web Service Definition Language) based view for use by the integration team
Reports Designer	Tool that enables business users to design and produce custom reports using table and formula data
