

CGI Digital Archive mobile app optimizes document management for the City of Vantaa

Vantaa, the fourth largest city in Finland, adopted CGI's mobile solution, which enables document management and archiving—anywhere, anytime.

CGI's document management platform has provided purchase invoicing and document archiving services to the City of Vantaa since 2009. CGI Digital Archive for mobile use advances the city's mobile strategy, which aims to promote mobility, increase financial efficiency and better meet the needs of end users. Currently, there are approximately 170 mobile archive users.

"The deployment of the CGI Digital Archive mobile application was one of the easiest and smoothest projects I have been involved in," says Paula Sillanpää, Service Manager of IT Administration for the City of Vantaa.

MOBILE ARCHIVE ADAPTS TO MEET EVOLVING WORK NEEDS

"CGI's document management platform, widely used in Finland, continues to evolve as the concept of working keeps changing," said Janne Tuominen, Senior Vice-President of CGI's IP product solutions in Finland. "Performing work is becoming increasingly independent of place when everyone has a mobile phone with them. Opening an app on your mobile phone is less cumbersome than logging into a computer, so there are no delays in taking care of business. CGI Digital Archive mobile app was developed to meet these changing work dynamics."

SAVINGS AND EFFICIENCY EVEN ON THE MOVE

The mobile archive drives cost savings by, for example, shortening the city's processing time for purchase invoices. "From now on, purchase invoices can be approved even while traveling," said Paula.

It also reduces penalty interest and recovery costs related to purchase invoices, resulting in even greater savings.

Users also benefit from increased flexibility and ease of work enabled by mobile use. In addition, the solution supports intelligent automation, empowering city workers to perform document management tasks, regardless of time and place.

CGI MOBILE ARCHIVE BENEFITS

- Ability to review and approve documents, regardless of time and place, significantly speeding up document circulation
- End user flexibility, efficiency and simplicity
- Secure and easy-to-deploy solution with simple monthly pricing
- Ability to use on any Android or iOS (Apple) device
- Browser version operates on all terminal devices
