## End-to-end vaccine tracking and administration

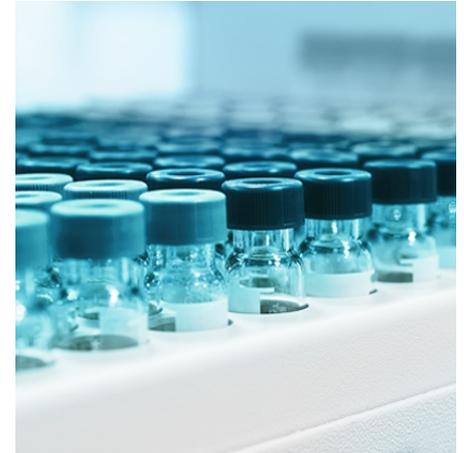

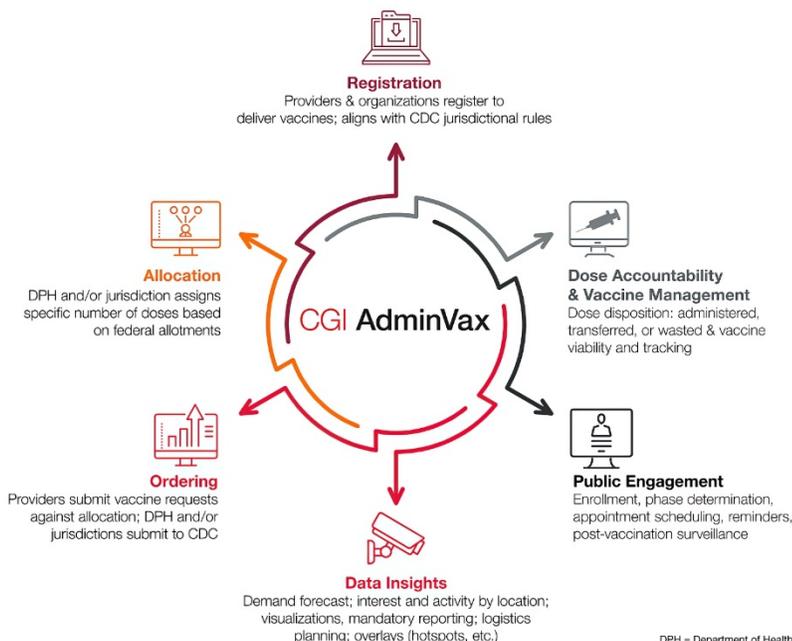

The impact of COVID-19 continues to push the limits of individuals, businesses and governments around the globe. As leaders look for new ways to expedite a return to “normal,” vaccine administration has become a focal point. How will jurisdictions predict demand, confidently order vaccines, and inoculate mass populations efficiently to curb the coronavirus?

CGI's health and government experts have deeply examined the vaccine-related challenges that lie ahead as we progress through the pandemic. Drawing on guidance from the U.S. Centers for Disease Control and Prevention (CDC) and industry best practices, we have developed **CGI AdminVax**, which is adaptable to meet local jurisdictional requirements.

Building on over 40 years of government and health experience, our end-to-end solution meets a range of client needs, from deploying discrete functionality to enhancing existing vaccine infrastructures. A modular platform allows organizations to implement the approach that works best for them, regardless of geography and target population demographics.

As shown in the diagram below, the solution is built on six core elements that meet regulatory requirements and address the vaccine administration lifecycle with a holistic approach that provides flexibility to meet evolving challenges.

### CGI AdminVax supports your critical business processes

### A TRUSTED PARTNER

Public and private health organizations need innovative business and IT solutions for their most complex challenges and mission-critical operations. As partners to these organizations, our experts bring deep knowledge of stakeholder platforms and needs. This uniquely positions us to help them prepare for what's ahead. We also help them achieve meaningful results by addressing business and policy issues in parallel with technology.

**11**

of the top 20 biotech and pharmaceutical firms globally are clients

**\$1.9B**

**230+**

hospitals and departments use our services and solutions

## CGI AdminVax is a comprehensive, modular vaccine management tool built on the following principles:

- **Reflects industry-wide expertise** from across government, public health, provider, payers, life sciences and emerging technologies.
- **Aligns with regulatory guidance**, industry best-practices, and technical and programmatic lessons learned from prior global pandemics.
- **Provides scalability and flexibility** to allow governments to take the approach that works best for them, regardless of geography and target population demographics.
- **Recognizes potential need for long-term vaccine tracking** and administration, allowing governments to easily adjust processes and workflows as needed.
- **Satisfies needs for population insights** regarding commitment to obtain the vaccine; order management, vaccine scheduling administration (including equitable allocation determination), logistics for vaccine administering; confirmation of first and second doses; surveillance intelligence post-vaccine.
- **Facilitates education, outreach, and communication** to help individuals understand the vaccination process, easily schedule appointments and receive reminders and surveys for post-vaccination surveillance.
- **Provides robust analytics**, including real-time data indicating population interest, priority, locations, and critical information necessary for reporting to oversight entities.
- **Allows a modular approach** so governments can fully leverage existing infrastructure and investments, focusing on the most challenging gaps and significantly mitigating implementation risk.
- **Streamlines implementation** with a platform accelerator with built-in core vaccine administration workflows.

CGI AdminVax helps organizations predict demand, confidently order vaccines, and obtain the analytics and transparency that will be vital in addressing the needs of stakeholders.

## ABOUT CGI

Founded in 1976, CGI is among the largest IT and business consulting services firms in the world. Operating across the globe, CGI delivers end-to-end capabilities, from strategic IT and business consulting to systems integration, managed IT and business process services and intellectual property solutions, helping clients achieve their goals, including becoming customer-centric digital enterprises.
