

CGI GeoApp -
unlock the power
of where in your
organisation

CGI

A data revolution is taking place around us. Much of this data has a location element to it. The recently published 'Unlocking the power of location: The UK's geospatial strategy' Geospatial Commission stated

“.. by 2025, the UK will have a coherent national location data framework. Future technologies will be underpinned by data about events occurring at a time and place. Location data will be the unifying connection between things, systems, people and the environment.”

Forward-thinking organisations are looking to tap into the power of where right now. However, many are struggling to exploit this opportunity due to three related challenges.

Data

Organisations don't know what they have, what format it is in, where it is and how it can be used and combined.

Geospatial Skills

Have been seen as the preserve of specialists often undertaken on expensive proprietary systems.

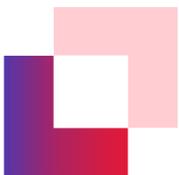

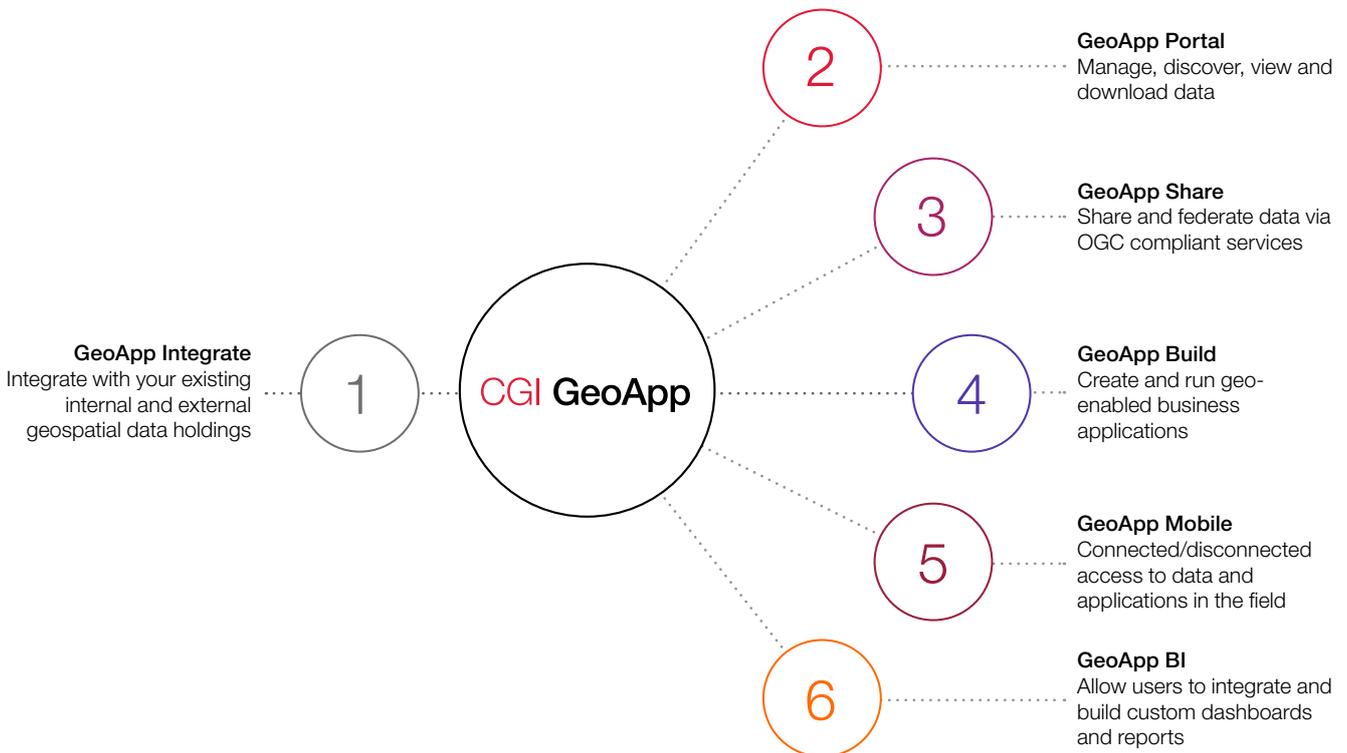

Tools

Have been standalone rather than integrated into end user systems where they can deliver most value.

CGI GeoApp – unlocking the intelligence in your location data

CGI GeoApp delivers all of the essential tools an organisation needs to successfully take advantage of location-based data and intelligence. CGI GeoApp is built on open standards. It provides a single, supported, out-of-the-box solution. CGI GeoApp is quick and easy to deploy, configure and extend via an integrated set of core modules.

This approach provides the best of both worlds—a quick and easy to deploy base capability that can be tailored to meet specific customer needs. CGI GeoApp is deployable in the cloud, on-premise or as SaaS.

CGI GeoApp – delivering tangible customer benefits

Saves time and money

Providing a 'one-stop-shop' from which to search, view and exchange data. This prevents duplication and enables a single view of your data holdings

Self-Service

Enabling the rapid deployment of customer-facing applications that provide self-service tools so your experts can focus on higher-value tasks

Automation

Designed to help you automate repetitive tasks

Open by design

Being based on open standards and an open architecture makes it easy to integrate with your existing technology estate

Security

Providing fine-grained access controls meaning users can only view the data they are entitled to

Fully supported

CGI providing as much or as little support as you need. There is no one size fits all approach. CGI can provide anything from basic product support/upgrades through to a full implementation service

Extensible

You can extend existing modules and/or create complementary modules

About CGI

Founded in 1976, CGI is among the largest IT and business consulting services firms in the world.

We are insights-driven and outcomes-based to help accelerate returns on your investments. Across 17 industries in 400 locations worldwide, our 76,000 professionals provide comprehensive, scalable and sustainable IT and business consulting services that are informed globally and delivered locally.

Our commitment: Insights you can act on.
