

# Do you have what it takes to beat the CGI Cyber Escape experience?

Your employees are the first line of defence to keep your company safe from cyber attack - but are they up to the challenge?

Most employees will try to do the right thing when it comes to cyber security, but they may not always be aware of what they need to look out for. This means malware and phishing attacks remain a significant challenge to many organisations.

Security is everyone's responsibility and all employees need to play their part.

Employees may not fully understand their own cyber responsibility and the consequences of their actions if they do not follow guidelines. Participating in physical cyber awareness training allows employees to experience how to keep information and assets safe in real world scenarios, and understand best practices in a fun and safe environment.

Over the past decade, escape rooms have become popular adventures for friends and families. Within a designated time, participants will look for clues, solve puzzles and decipher riddles to earn their escape.

We have created CGI Cyber Escape to help employees understand potential cyber security risks; compliment existing security awareness training and increase their knowledge of how to reduce the impact of a cyber-attack.

CGI Cyber Escape can be brought to sites around the UK for your employees to see if they are up to the challenge!

## What to expect

- CGI Cyber Escape is built inside a shipping container, which will tour the UK, stopping at CGI offices and client sites.
- Teams work together to discover clues, solve puzzles, and accomplish cyber related tasks in order to progress and “escape” within the time allowed.

## Topics covered in the CGI Cyber Escape include:

- IT Security
- Phishing email attempts
- Document handling
- Device handling
- Physical security
- Document disposal and destruction
- Social engineering
- Firewalls

- 30 or 60 minute sessions for up to 6 people at a time.
- Tasks are aligned to different security learning objectives. Upon successful “escape”, participants will receive a handout with the learning outcomes, further information on security and an escape certificate.
- The whole experience is facilitated by a CGI Games Master.

## An experience for everyone

Technology alone is not enough to implement effective cyber security. Employee diligence and awareness, along with threat intelligence and skilled cyber security professionals are all part of the equation. CGI Cyber Escape provides security awareness training in a fun and memorable way for your employees to learn the basics of cyber security and help control risks within their organisation.

Whilst we are focusing on supporting our clients in enhancing their security awareness, CGI Cyber Escape is also available for wider community programmes. We would be happy to join you in supporting your own corporate and social responsibility activities and community outreach programmes.

We are able to deliver CGI Cyber Escape to suitable sites for extended periods, allowing our clients, their clients and the surrounding community to experience the challenge.

CGI Cyber Escape can be facilitated to suit a variety of age groups from Year 7 (Scotland S1) upwards, making the experience suitable for a range of groups as well as IT and business professionals.

### How to get in touch

If you would like to book our Cyber Escape experience, please email [cyberescape@cgi.com](mailto:cyberescape@cgi.com) for availability.
