

CGI's IT Asset Management – Quickly gain control of your IT resources

Whether you are looking to realize a fast return on investment or struggling with compliance or audit risks, CGI's Software Asset Management (SAM) Quick Start is a proficient way to get started on your IT asset management journey.

CGI's IT Asset Management (ITAM) solution provides you with a framework and corresponding processes that strategically track and manage all financial, physical, licensing and contractual aspects of your IT assets throughout their life cycle. As part of our ITAM portfolio of services, CGI's **SAM Quick Start** gives you the jumpstart needed to initiate your IT asset management strategy.

CGI's **SAM Quick Start** generates IT asset insights you can act on.

From our work with a large number of enterprises, we typically achieve upwards of 30% savings in the first year and a minimum 5% savings in subsequent years.

Our experts work with you to optimize your IT asset management in a way that best fit the demands of your business.

How does SAM Quick Start work?

It takes only a short time for us to provide you with feedback and insights you can act on to realize savings and establish next steps; typically, just two to three months after all client information is made available.

KEY BENEFITS

- Direct return on investment
- No tool implementations or other technical dependencies
- Key insights into your IT assets based on information already available
- Significant cost reductions; typically, up to 30% direct savings in the first year

WHY CGI

- Support for optimizing your operations to drive performance
- Independent, vendor-neutral partner, bringing experience and expertise from relevant industry domains and our collaboration with major software providers
- Full range of ITAM services, initiated by **SAM Quick Start**
- 20+ years of experience and best practices embedded within our ITAM framework, global delivery capabilities, and other relevant offerings, such as security and IT service desk

CGI's **SAM Quick Start** does not require any technical implementation or tooling. All that is required is to provide records that already should be available, such as inventory data, user statistics and license information.

Once we receive your data, our asset and license experts review and analyze it. We then cross-check the data to create views with corresponding analyses that identify benefits you can realize through cost management, improving system agility, or reducing risk to your organization.

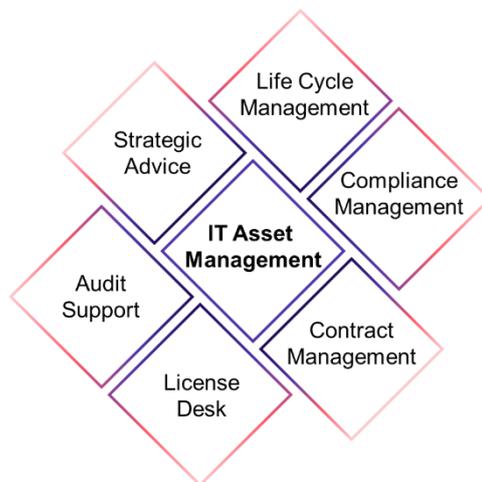

We provide periodic reports to highlight relevant insights and recommendations, helping you gain/regain and improve control of managing your IT assets in line with demand from across your business. These insights also help you visualize your IT asset return on investment and enable you to make IT and business decisions in a more efficient manner.

We work with you to develop follow-up actions based on the insights and recommendations delivered through the **SAM Quick Start**. These actions focus on embedding continuous improvements across your organization, identifying where further returns could be derived, generating savings, and improving risk mitigation to ensure audit compliance.

These actions can be performed independently or initiated in parallel, whichever approach best fits your business requirements.

Learn more about CGI's ITAM portfolio

Our global team can provide all of the insights and best-fit services you need to get more value from your spend on software and hardware assets. We can help you balance value and risk at every step of your journey. We provide the services in our ITAM portfolio on an expert consultancy basis, on a project basis, as a managed service, or through a combination thereof.

Contact us today for more information on how to get started on your ITAM journey.

SAM QUICK START CLIENT EXAMPLES

- For a large multi-national organization with approximately 28,000 software assets, we identified and removed software products not used for more than 60 days, achieving an average savings of €200k per month.
- Working with a large global organization with approximately 70,000 assets, we conducted a clean-up campaign of all Microsoft Software Developer Network (MSDN) subscriptions for staff who had left the company, resulting in a one-time savings of €8M.
