

CGI Vax Verification

Like many other employers, CGI has been dramatically affected by COVID-19 and the impact on business, workplace and employees.

We understand the importance of maintaining a safe workplace and the obligation to keep employees safe while adhering to emerging COVID-19 workplace regulations.

CGI is no stranger to quickly addressing pressing challenges as they arise. We are able to rapidly pull together a team of experts from our health, security, cloud, delivery, and partner network to with speed and agility. Building on our successful vaccine management implementations and leveraging native capabilities of Salesforce, we have packaged a secure, feature-rich, practical, and flexible solution that can be deployed quickly to assist employers with vaccine and testing verification regulations: **CGI Vax Verification**.

Why our solution?

Modular components

CGI Vax Verification includes modular components to provide robust functionality that employers need. Integration with employer human resources or ERP systems is an essential part of the solution to load employee demographics. Other components include email integration, record storage, analytics, and integration with state and federal immunization registries, if needed.

One centralized platform

Our solution allows you to manage processes at scale and quickly visualize employee status, office compliance, and target specific groups (not the entire population) for follow-up, periodic test result data collection, etc. Design thinking principles provide a straightforward, branded experience to allow employees to move through the process quickly and administrators to have holistic views of data with dashboard drill-downs for specific details.

CGI Healthcare expertise plus the power of Salesforce

CGI's unique experience as a Salesforce implementation expert coupled with our deep healthcare industry expertise enables us to deliver fully integrated solutions quickly. With the clarity and flexibility of CGI's Health Cloud platform powered by Salesforce, CGI Vax Verification brings the ability to fast-track your compliance programs.

Designed to scale

A flexible design recognizes that change is a constant, and allows for configuration of additional functionality, new requirements, expansion as company profile changes, additional integration points, updates to address new requirements as well as net new use cases throughout the organization.

Built for rapid implementation

Time is of the essence – employers must act quickly to comply with OSHA Emergency Temporary Standard (ETS) or face a penalty. CGI's solution is built with rapid deployment in mind. Outfitted with core functionality, CGI's AdaptiveSI implementation methodology enables teams efficiently configure and deploy within weeks not months. You will be ready with CGI Vax Verification.

How does it work?

- **Portals, workflow, scheduling:** Allows employers to communicate with employees via email and calendar, schedule testing appointments (if necessary), while also enabling employers to verify submissions and follow-up with employees.
- **Records management:** Provides a fully integrated, 360-degree view of the employee's compliance, from flexible data collection (vaccination, test results, boosters, etc.) and secure storage.
- **Inventory management:** Supports supply ordering, inventory management, and demand forecasting if needed for test kits, sanitation supplies, social distancing efforts.
- **Communication and notifications:** Provides customizable views based on user roles and permissions to share up-to-date information through blog posts, submit patient feedback, facilitate health surveys, and send notifications of upcoming appointments via text and email.
- **Analytics and monitoring:** Provides standardized reporting and applies advanced analytics for holistic look at employee population vaccination or testing status. Ability to target audiences and facility needs.
- **Integrations:** Leverages CGI integration expertise to securely and seamlessly integrate with HR systems for employee demographics or to integrate with state immunization registries and the CDC's Immunization (IZ) Gateway Connect, if needed.

A day in the life

Employers leverage the "Command Center" to review dashboards and status navigating easily to generate email or text communications to employees to request vaccine verification or testing results.

Employees, using their mobile device or computer, are prompted to complete a questionnaire, upload their vaccination card and attest.

CGI Vaccine Management implementations delivered over 1 million doses for:

- Louisville Metro Department of Public Health and Wellness
- City of Austin Public Health
- City of Dallas Public Health
- San Antonio and South Texas
