

CGI Container Platform as a Service

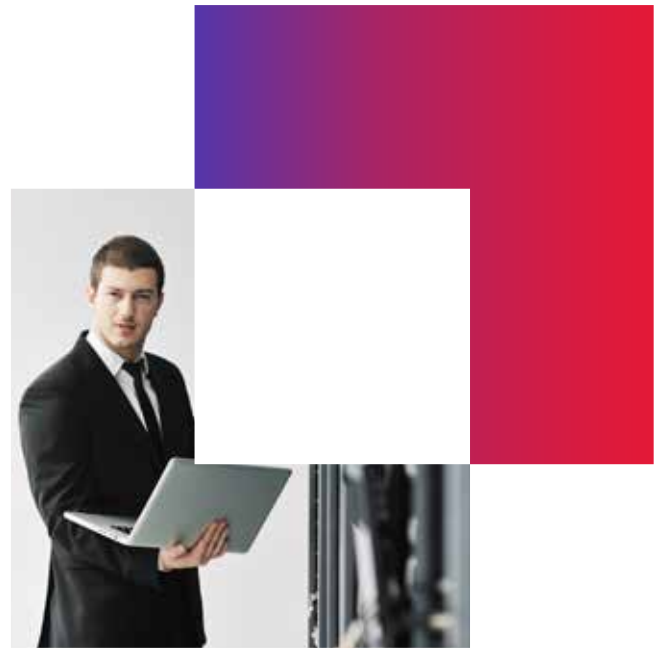

Modernize your enterprise workloads with futuristic solution build-in with emerging technologies.

CGI Container platform as a service is an enterprise ready comprehensive platform solution offering, which helps to transform and modernize applications aligning to the IT strategy to meet the business goals.

Enterprise IT is racing towards adopting and moving towards implementing Agile methodologies in their IT ecosystem to be a competitive player in the respective markets. DevSecOps has become an increasingly common approach for agile software development. Developers and operations teams are trying to build, test, deploy and manage applications with speed, quality and control. The biggest challenge for enterprise businesses and IT teams is with the choices of the platforms and their readiness, with growing demand of features on the platform that helps the developers build and deploy applications fast, secure and scalable ways.

CGI Container platform as a service is a great choice to support your IT strategy and business ambitions. This service helps the developers and business units to choose across various platforms based on the features aligning to the business goals and quickly onboard to start the transformation journey involving modernization and green field builds of the enterprise business workloads. CGI CPaaS offering is agnostic across hosting and container platform solutions.

This platform generates more business value to the enterprise with faster onboarding, quick adoption and implementation of agile methodologies, continuous integration, continuous delivery, shorter development life cycles, more release cycles. It acts as a catalyst and contributes value to the business ambition.

This service offering is dedicated, fully managed and hosted by CGI with built-in automation and self-service capabilities the user can control their environment as business requirements change. Without having to invest in managing the platform and its components at various layers in the architecture covering web, tools, OS, hardware, storage, backups, networks, security, etc. Fast delivery, no maintenance of the platform, and most importantly immediate, effective protection. With security features in built, you eliminate the time, cost and hassle of provisioning, managing, and scaling hardware and software as per your business compliance demands. Offering also ensures to enable fast, consistent delivery of the newest feature updates, helping you stay up to date by enabling you to be the first in the marketplace.
