

CGI Portfolio Assessment Café

A successful cloud migration approach requires a holistic view of the enterprise to enable the right decisions and trade-offs.

Many organizations lack a comprehensive cloud migration strategy, struggle to identify cloud migration opportunities, experience cloud migration failures, and quite often do not realize the expected benefits of moving to the cloud. A successful cloud transformation journey for an enterprise begins with an assessment and strategy phase that helps define the current state and determine the target pathway for applications present in the application portfolio. The CGI Portfolio Assessment Café focuses on all aspects of cloud migration.

Inform your business case for cloud transformation

The Portfolio Assessment Café informs the business case and service model for cloud transformation by bringing together data insights and personnel. The Portfolio Assessment Café is a web-based application that drives tailored application portfolio strategy for cloud transformation. The Portfolio Assessment Café integrates application portfolio metrics from single or multi-cloud environments into curated and consolidated dashboards. It integrates with other assessment tools and enterprise systems, including client systems.

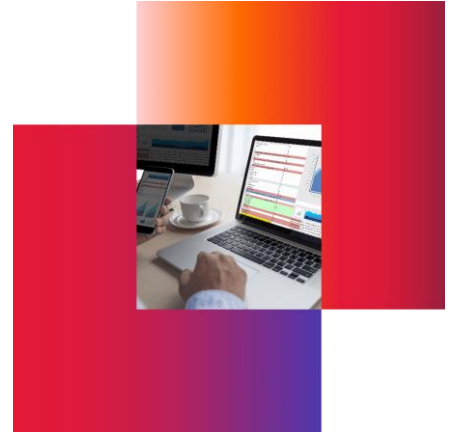

What do you gain with the Portfolio Assessment Café?

- Clear guardrails with a proven cloud assessment methodology
- Best-in-industry accelerators and integrated tools, including the CAST and Flexera suites of products
- Governance and process maturity with a plan and direction for program actors and stakeholders

How does the Portfolio Assessment Café work?

Plan

In the planning phase, we work with you to set project scope and objectives and define data, metrics, and KPIs. Our consultants identify information sources and toolsets, then we create the project plan and engage your stakeholders.

Your partner for your journey to the cloud

Whether your requirements lead to public, community or private clouds, or most likely a hybrid mix of all of the above, CGI's cloud and hybrid IT practice can help you successfully navigate the planning, transition, integration and ongoing management of your hybrid cloud solution. This includes integrating both cloud and traditional IT environments with comprehensive governance to ensure alignment with business strategy.

flexera

Inform IT. Transform IT.™

Discover

We leverage the Portfolio Assessment Café to capture data from source systems defined in the planning stage in the discovery phase. We capture auxiliary business and technical inputs via surveys sent to application owners, then identify and resolve gaps and data quality issues.

Measure

We import portfolio metrics in the measurement phase. We collect additional data where needed. We then determine the total cost of ownership metrics using cloud provider pricing information.

Analyze

We leverage the Portfolio Assessment Café dashboards and visualizations to analyze the collected application portfolio data in the analysis phase. We work with you to review and refine each application's automated suggestions and cloud migration options. Our output for your next transformation steps is a cloud migration recommendations report.

Benefits

Faster time to cloud

The Portfolio Assessment Café reduces friction in your cloud journey by clarifying your options for application transformation.

Make better decisions

Our insights-based approach gives you the data you need to make the best decisions around your application portfolio and target cloud environment.

Maintain security and compliance

The Portfolio Assessment Café scans with the best-in-class security products to give transparency into your application portfolio's health and security status.

Tailored for your cloud journey

Our cloud experts work closely with your organization to understand your IT landscape and produce the best-fit recommendations for your cloud transformation program.
