

Does the average escape room no longer have any secrets for you? Try the Hacker Escape! In an undercover vehicle, your goal is to track down the hacker who is threatening the Netherlands. Together with a colleague you find out who the criminal is, where he comes from and what his target is. But he's not going to make it easy for you...

Cybersecurity is an increasingly relevant theme for many organizations. Often it's approached from the premise of risk and fear, which does not lead to a structural improvement in behaviour. The CGI Hacker Escape makes the subject tangible, making the effect of one's own actions clear.

Cause and Effect?

The Hacker Escape is an easy way to discover what you know, or think you know, about Cybersecurity. Every choice you make has direct consequences for the course of the game. In this cat-and-mouse game you will find out ways in which malicious parties try to obtain your information. With each step you get more into the attackers head and find out what you can do to stop him. Are you the cat or the mouse?

Your own Hacker Escape?

The mobile Hacker Escape can be taken to almost every location. Each round takes 15-20 minutes and is played in teams of two under the guidance of an experienced CGI security consultant. Another way to learn about security or just a nice break from the (work) day.

Questions?

Contact us via 088 – 564 4560 or hackerescape.nl@cgi.com. It is also possible to tailor scenarios to specific situations or to discuss points of concern of the current security policy. Additional information, including interesting videos, can be found on our website www.hackerescape.nl.

Purpose

- Strengthening team spirit
- Awareness of your own influence on the security of your organisation
- Information security becomes a topic of discussion among your employees
