

Cyber Threat Intelligence Service

Cyber Threat Intelligence is knowledge of your adversaries and their motivations, intentions and methods that is collected, analysed, and disseminated in ways that help security and business staff at all levels protect the critical assets of the enterprise.

We provide a market-leading range of Cyber Threat Intelligence services to identify potential vectors for cyber-attacks. We work together with you to understand risks to your security, helping you rapidly detect and respond to any potential or active attacks early on.

Our service combines best practice intelligence management processes, open and closed intelligence sources together with the experience of our dedicated intelligence analysts.

Benefits

- Predict, identify and rapidly mitigate cyber-attacks with insights and intelligence that reach far beyond your own network defences.
- Improve your threat detection with better visibility of threats explicitly targeting your sector, infrastructure and digital assets.
- Apply constant monitoring using advanced threat intelligence platform tools, so no attack goes unnoticed or unaddressed.
- Achieve in-depth understanding of new global risks, informed by a world-wide network of threat intelligence expertise, and stay one step ahead of attackers.
- Ensure your security posture is proactive not reactive, and improve decision making during and after a cyber-intrusion.

Why you need to take action

Threat intelligence remains one of the top investment priorities in cyber security. Over the last few years enterprises have been constantly bombarded with advanced and unknown threats they are not equipped to deal with. Alongside this, organisations have had to rapidly adapt to new requirements for remote working, putting pressure on those who need to provide authorised users secure access to confidential databases, critical systems and cloud workloads.

Cyber criminals have scaled up their attacks to take advantage of these challenging circumstances resulting in a significant rise in social engineering, ransomware attacks, data thefts and supply chain compromises. Without threat intelligence, enterprises are unable to understand who may be targeting them and the tools, techniques and procedures they use. This lack of knowledge limits defenders in mitigating the risks to your organisation, makes it difficult to prioritise your vulnerability management and to focus limited budgets on target areas. Working alone makes it extremely challenging to prevent or identify these attacks.

Organisations need a comprehensive strategy to protect themselves from:

- Cyber criminals
- Hacktivists
- State-sponsored attackers
- Insider threats

Without a comprehensive security strategy organisations leave themselves vulnerable to attacks that could cost millions to recover from and seriously impact their brand value. Cyber Threat Intelligence assists decision makers in understanding their specific threat landscape so that they can assess their organisations cyber resilience and create a strategy to improve their cyber security maturity level.

Intelligence is drawn from a comprehensive range of sources, such as intelligence reports from cyber security experts and vendors, and raw data, like malware signatures, leaked credentials on a paste site or registered domains associated to your trademark and company.

How our Cyber Threat Intelligence service works

Threat intelligence remains one of the top investment priorities in cyber security. Over the last few years enterprises have been constantly bombarded with advanced and unknown threats that they are not equipped to deal with.

In today's world, businesses need a service that constantly monitors the attacker's behaviours and their attack campaigns to identify the IP addresses, URLs and other common attack indicators of compromise (IOCs). To do this it is vital to have access to cyber threat intelligence which is built from evidence-based knowledge of actual breaches and attacks – so you can be prepared, identify and prevent real-world cyber threats from all angles.

At CGI, intelligence is drawn from a comprehensive range of both open and closed sources. This includes intelligence reports from cyber security experts and vendors, raw data, malware signatures, leaked credentials on a paste sites or registered domains associated to your trademark and company.

Our highly skilled threat intelligence analysts assess the information gathered and turn it into intelligence that can be trusted. We provide landscape and industry reports at regular intervals, threat intelligence monitoring and alerts, and refined reporting specific to your organisation. All of our intelligence products provide insights that allow you to take action to mitigate the risk and are aligned to the MITRE ATT&CK framework, as advised by the NCSC.

We also offer a range of complimentary services including malware analysis, phishing defence and our 'Corporate Digital Footprint Analysis', which examines your digital footprint from an attacker's perspective, revealing potential methods of attack that could be used.

We integrate our service with your existing security tools and infrastructure. Our Cyber Threat Intelligence envelops your IT security posture providing a defensive force multiplier to your operational or network security teams. We can provide ingestible data feeds that provide intelligence straight into security tools such as SIEM, IDS and firewalls maximising their capabilities to identify threats, bolstering your automated security response. What is more, we can start delivering threat intelligence services in as little as seven days, so you can rapidly understand your organisation's threat landscape and take immediate action.

Intelligence is drawn from a comprehensive range of sources, such as intelligence reports from cyber security experts and vendors, and raw data, like malware signatures, leaked credentials on a paste site or registered domains associated to your trademark and company.

Why CGI?

We are a leading supplier of cyber security services in the UK, Europe and North America. Our UK Cyber Threat Intelligence (CTI) service is provided from our Cyber Centres of Excellence in Reading and Bridgend.

Our SANS and CREST certified analysts monitor the latest cyber threats through advanced threat intelligence platform tools. We then provide you with insights and evidence-based knowledge based on a global network of threat intelligence expertise from over 70 million cyber-attacks per day. The result is a significantly better informed and up-to-date level of protection than if you were operating alone.

We have a long-standing and highly regarded reputation in IT and business consulting, offering Cyber Threat Intelligence and other managed services across a wide range of sectors including commercial, education, financial, insurance and central government. Individual reference points are available upon request.

Our Cyber Threat Intelligence envelops your IT security posture providing a defensive force multiplier to your operational or network security teams.

Choose a service level that suits you

Cyber Threat Intelligence is delivered over three service tiers. We recommend an open discussion with your CGI contact to establish which is the most suitable to your organisation.

Our Cyber Threat Intelligence service can also form part of a **Protective Monitoring (ProMon) package**. ProMon is our fully outsourced monitoring solution that is customisable according to customer size, scope and budget.

Baseline

- Daily threat landscape report.
- Tactical threat intelligence.
- Monthly industry threat report.

Enhanced

Baseline +

- Operational threat intelligence.
- Threat workshops.
- Monthly reporting.
- Monitoring and alerting.
- CDFA (corporate digital footprint analysis) x 1 per quarter.

Advanced

Baseline & Enhanced +

- Static and dynamic malware analysis.
