

Cybersecurity Solutions

Evolve with the threat and
technology landscape

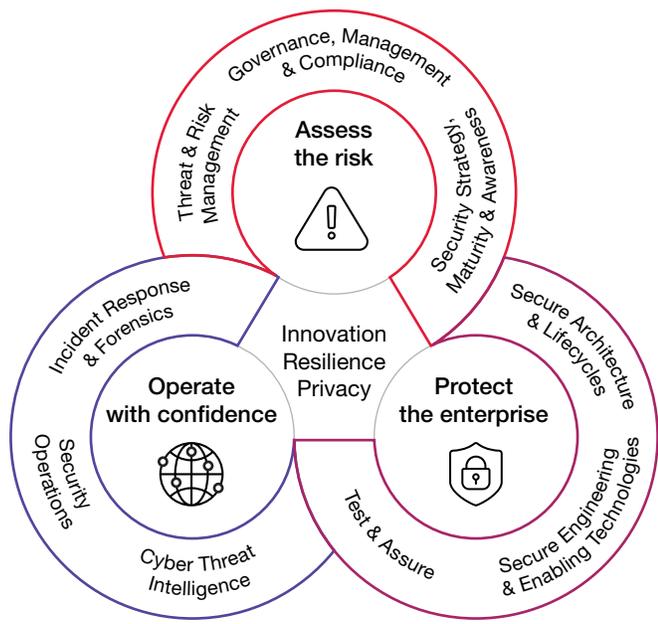

Federal agencies are facing rapidly changing and increasing cyber risks, requiring a focus on continuously improving their cybersecurity posture across a complex landscape of systems and data.

To enable the uncompromised continuation of mission delivery, CGI offers a full suite of services and solutions that mitigate risk and increase organizational resiliency at the speed required while maintaining low disruption to ongoing operations.

On the forefront of cybersecurity for decades, CGI's focus is on understanding threats in current context with real-world intelligence. Drawing on that analysis, CGI partners with agencies to provide comprehensive guidance and actionable insights.

We help agencies prevent, detect and respond to risks with the right level of security across the IT ecosystem—from data centers to hybrid work offices, and from the cloud to the tactical edge.

independent Red Team

Leaders in compliance and governance management for FISMA, FedRAMP, CMMC, HIPAA, and NIST standards

Staying ready for what is coming

CGI's experts, armed with a firm and current understanding of the latest and most dangerous cyber threats, determine the capabilities and technologies for each agency to deploy across the enterprise to protect their systems and networks. We deliver the best-fit solution with proven best practices and the latest technology.

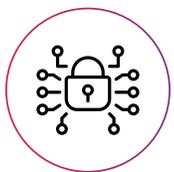

Strategies to build resiliency and adaptability

Our federal cyber advisory and consulting services help agency business and IT leaders understand how to develop next generation cybersecurity approaches within constrained budgets, highly regulated environments and an evolving technology landscape.

Move forward in your cloud journey with certainty

With a cloud-agnostic approach, we enable agency leaders, through knowledge sharing and industry-leading practices, to confidently advance their cloud strategy, whether that is migrating from on-prem IT to the cloud or securely sustaining hybrid cloud environments.

Gain actionable cyber intelligence

The CGI Federal Cyber Threat Analysis Center (CTAC) is a full-service solution center that focuses on improving security posture for agencies to combat challenging cyber threats. Applying proactive measures and threat hunting, our services include incident management, digital forensics, threat intelligence and malware analysis.

Utilize secure data sharing to enable decision-making

As a leader in helping agencies leverage the power of data, CGI delivers solutions such as CGI SecureDataFabric that provide a chain of custody to safeguard data — both internally and across silos — at rest, in transit, and in use. CGI brings extensive experience in controlled unclassified and classified data protections to our federal partners.

Flexible security services for evolving needs

CGI provides security as a service, security operations center (SOC) as a service, and managed services to continuously evolve your agency's cyber posture through ongoing innovation and access to the latest tools to reduce the cycle time for threat identification and response and lowers the cost of maintaining an evolving cybersecurity posture.

Mitigate and investigate insider threats

CGI takes a proactive approach to deterring, detecting and responding to threats includes those from within the organization. With an emphasis on maximizing the effectiveness and utilization of data, we apply behavioral analysis and intelligent automation to reduce risks from intentional or unintentional insider threats.

CGI is supporting over 40 federal agencies in their cyber journey as part of two ongoing Continuous Diagnostic and Mitigation (CDM) efforts:

- Our team is currently improving the security posture of seven federal agencies: The Departments of Commerce, Justice, Labor and State, the U.S. Agency for International Development, Federal Communications Commission and the Tennessee Valley Authority. The program implements tools, sensors, and services to measure elements of the agency's cybersecurity posture and report on a series of agency and federal dashboards.
- We are also working to enhance the cybersecurity posture and risk awareness at DHS's Group F agencies, which include 75+ Non-Chief Financial Officer (CFO) Act Agencies. CGI is providing DHS's Cybersecurity and Infrastructure Security Agency (CISA) with a shared services platform to deliver CDM cybersecurity, ensuring the agencies can evolve with the threat and technology landscape, including developing innovative cloud native and hosted service solutions.

About CGI

Insights you can act on

Founded in 1976, CGI is among the largest IT and business consulting services firms in the world. We are insights-driven and outcomes-based to help accelerate returns on your investments.

Nearly 7,000 of our experts help the U.S. federal government achieve comprehensive, scalable and sustainable IT and business goals. We enable our clients to execute digital transformation, build the federal workforce of the future, achieve operational excellence, enhance citizen engagement and protect America's assets. As the federal government faces unprecedented challenges, we remain committed to enabling its success, using our deep understanding of clients' goals and mission essential needs to provide consultative insights and develop solutions for maximum results.
