

CGI, your leader in federal cloud transformation

As you guide your agency on its transformative cloud journey, you can expect it to be long-term and complex. For a successful journey, you have no better partner than CGI. Our cloud experts provide insight and expertise to execute complete cloud initiatives at every stage in the transformation journey.

The CGI approach – we meet you where you are

No matter what phase you have reached in your transformation projects, we can step in alongside you – from early-stage business case building, through application and provider selection all the way to post-migration multi-cloud optimization.

The CGI consultative approach, which our clients value highly, is a **collaborative** approach. We act as your partner across all levels of your organization to understand your unique needs and objectives. Together we work to arrive at your optimal cloud pathway, leveraging best practices from our federal clients as well as commercial enterprises.

CGI's global organizational structure allows us to draw from **expertise around the world**, sharing best practices for enterprise transformation and secure data modernization. We apply this knowledge as appropriate in the context of federal initiatives.

Our federal experts earn **valuable certifications** in all cloud-related areas and are experienced in leading and executing programs from the executive to programmatic level. As a result, we deeply understand the business of government and the federal landscape. Through experience, we have developed superior, proven capabilities in federal back-office functions (e.g., finance, acquisitions) that undergird the cloud journey.

To ensure you have access to the full scope of cloud opportunities, CGI also serves as a **cloud broker**, offering you a unified interface for easier management of multiple cloud services and ensuring secure exchange of data with cloud and on-prem applications.

We know every aspect matters across your agency

Our cloud experts recognize that choosing the right providers is only one aspect of a successful migration. We differentiate our

Mastering hybrid IT

Most organizations are operating in a hybrid cloud/on-prem IT environment. CGI's Cloud and Hybrid IT Advisory Services focus on establishing the policies, plans, procedures and technical elements of your agency's strategy to develop a responsive, informed roadmap for the future.

Working alongside your leadership team, we help evaluate your business goals and technology landscape to develop a hybrid IT strategy customized for your agency. Together with you, we forge a path to success.

services by the vast breadth of expertise we bring to other essential considerations:

- Developing a detailed understanding of your current environment that includes in-depth knowledge of your architecture, data sources and pain points that are unique to your agency.
- Assessing your security and data governance requirements. You should put zero trust at the foundation of every aspect of your cloud journey. Our experience in establishing cybersecurity protections and data governance models will help you make decisions that keep you secure and compliant.
- Anticipating the cloud implications of emerging technologies. On your journey, you will encounter opportunities to adopt innovations involving artificial intelligence, machine learning, Web3, metaverse and more. We can ensure that decisions made today will accommodate those opportunities as they arise.
- Integrating your myriad data sources into a unified display of key data. In many of today's data environments, data and incomplete pictures hamper management's decision-making. We help you optimize your cloud investments by showing management the data they need for insights into the big picture and ongoing trends.
- Determining your optimal multi-cloud arrangement and cloud vs. on-prem. For every agency, there's a different answer to what belongs on the cloud and what remains on premises. Our access to best practices helps you arrive at informed answers.
- Understanding and troubleshooting your data center and its pain points. We understand the complexity of data center operations where even minor changes can have unintended consequences. Whether your data center has resource, agility or reliability constraints, we can help you resolve them.
- Developing applications and deploying tools efficiently to optimize your cloud investments.
