CGI Fly to Oracle Cloud

Packaged services for our clients to start their journey to Oracle Cloud in a fast and secure way. Solutions on hybrid architectures combining Oracle Infrastructure and Platform. Part of this portfolio is included in the Boost your cloud initiative, led by Oracle.
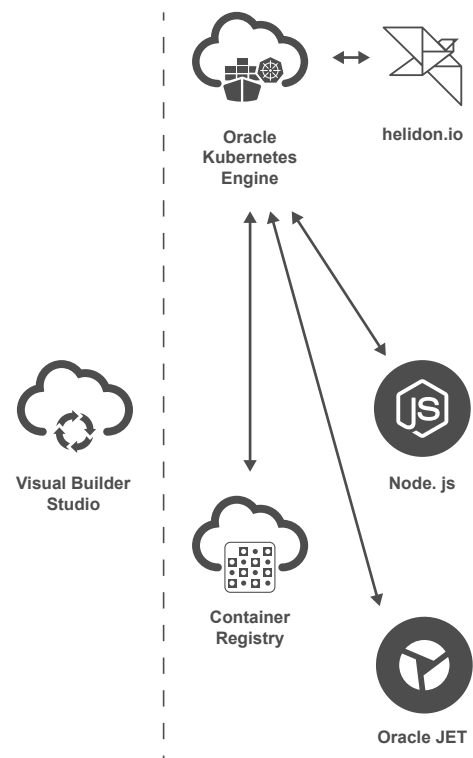

Custom Development

Easy, quick and streamlined implementation of any application in the public cloud, freeing workload from your data center. Deployment of legacy applications, J2EE and your backend with APIs, Node.js, PHP or Ruby. Your development team will be able to work in collaboration in a cloud-based environment and, through cloud developments, you will be able to complement your SaaS services.

Backend Development

Traditionally, the development of web services has been carried out using a large portfolio of technologies, which forced us to buy, install and configure multiple products if we wanted to move it to the cloud. However, using Oracle Kubernetes Engine we can deploy all these resources in the same system as Docker containers, being able to take advantage of the scalability and versatility options that Kubernetes offers us.

Pack steps

– Analysis.

– Oracle Cloud account configuration.

– Product configuration.

– REST API design and implementation, up to 5 services.

– Deployment of an application (including APIs) up to 5 services.

– Documentation.

– Development guide and best practices.

– Training for developers and administrators.

Oracle Kubernetes Engine

helidon.io

Visual Builder Studio

Container Registry

Node. js

Oracle JET

Implementation

📅 5-8 weeks
