

CGI Fly to Oracle Cloud

Packaged services for our clients to start their journey to Oracle Cloud in a fast and secure way. Solutions on hybrid architectures combining Oracle Infrastructure and Platform. Part of this portfolio is included in the Boost your cloud initiative, led by Oracle.

PaaS for SaaS

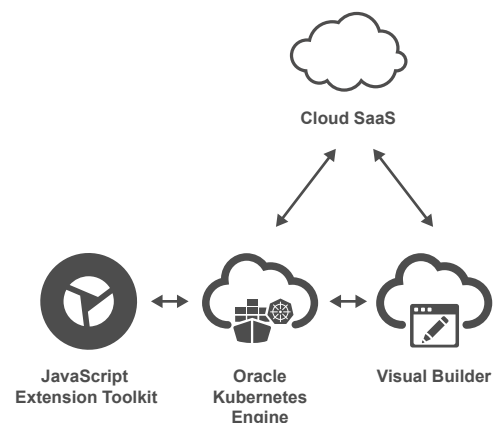

Complement the functionality of the SaaS services that you have (in any cloud) through the multiple services of Oracle Cloud PaaS. This will allow you to extend the functionality of these SaaS services, improve their connectivity, increase your security and analyze the data in greater depth.

Development for SaaS

Software as a Service (SaaS) products provide extensive functionality, but sometimes, changes are necessary to allow us to tailor those products to suit our business model. Using products like Oracle Kubernetes Engine for the services layer or Oracle Visual Builder for the front-end, we can easily extend the functionality to be consumed by a multi-device application or add new functionality to the product with Oracle JET.

Pack steps

- Architecture design including Cloud Services.
- Development of up to 5 services hosted in Oracle Kubernetes Engine.
- Development of up to 2 screens with Visual Builder.
- Functional and load testing.
- Documentation.
- Development guide and best practices.
- Training for developers and administrators.
- Optionally maintenance and support.

Implementation

7-9 weeks
