

CGI Fly to Oracle Cloud

Packaged services for our clients to start their journey to Oracle Cloud in a fast and secure way. Solutions on hybrid architectures combining Oracle Infrastructure and Platform. Part of this portfolio is included in the Boost your cloud initiative, led by Oracle.

Disaster Recovery

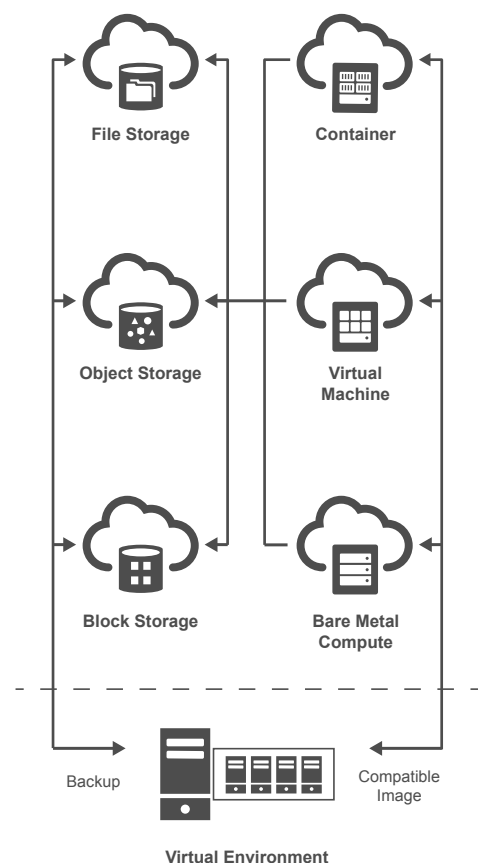

Use the cloud as a backup to your On-premise Oracle services. These packs are designed to increase the availability of your On-premise systems and have different degrees of coverage in the event of a contingency: backup to be able to restore on your data center; backup to restore on the cloud itself; complete replicated system to activate when necessary.

Virtualization Disaster Recovery

This service provides a simple way of achieving a backup service for your virtualized system. You can simply have a backup copy of the images of your virtual environments or an active environment that allows you to complement or replace it in case of failure to the original application.

Pack steps

- Analysis of requirements (RPO-RTO).
- Provision and configuration of the Cloud components: Compute Cloud Service, and Storage Cloud Service.
- Exportation/Importation of images.
- Start-up tests.
- Knowledge transfer.
- Optionally, integration with the existing On-premise infrastructure.

Implementation

1-2 weeks
