CGI Cyber Security Services

for State Government

CGI

We help organisations achieve cyber security resilience and are a trusted partner of State Government and other public service organisations across Australia.

Citizens need assurance that their personal data is protected and that their interactions with their Government authorities are safe and secure. With increasing reports of cyber-attacks, Government members recognise that hard-earned trust can vanish with a single incident.

Cyber security incidents, resulting in breaches of data, are on the increase. Criminals and hacktivists continue to attack, hitting the headlines as frontline services are disrupted, money defrauded or personal data leaked. In addition, Government bodies are under pressure to maintain compliance with regulatory standards.

Our solution

At CGI, cyber security is part of everything we do, so although it may seem difficult to consider security while trying to innovate and extend your operations, we can help make this a reality. Our cyber security services operate in three integrated areas:

- Assess the risk.
- Protect the business.
- Operate with confidence.
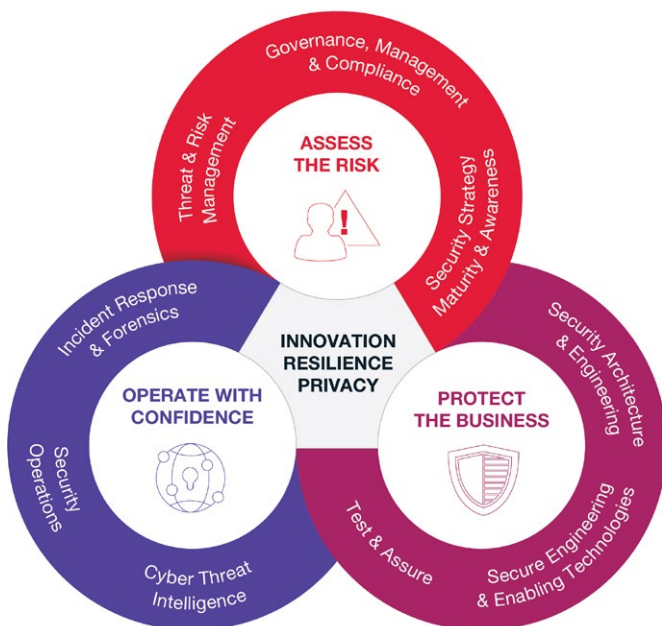

A cyber security partner you can trust

- We are a registered supplier on the NSW Dept of Customer Services Professional Services Panel Agreement (PSPA).

- In Queensland we are a member of the ICT13.03B panel

- Our Local Buy LB308 ICT and Telecommunications contract provides ease of engagement in QLD, Tasmania and NT.

- We are a preferred vendor to the Victorian Government via Cenitex to deliver penetration testing and cyber security services.

- We hold a range of security certifications including: ISO27001:2013, ISO22301 and ISO27701.

- We're a local team backed by 1,200 CGI global security professionals

- 24x7 Melbourne-based Security Operation Centre, with interstate redundancy, providing sovereign compliant services.

- OT and Critical Infrastructure cyber specialists.

Integrating services across the security spectrum

Government employees may not fully understand their own cyber responsibilities and the consequences of their actions if they do not follow policy and guidelines.

We can provide focused training, guidance, services and tools to inform, educate and maintain security awareness. We also offer a proactive Operational Security Monitoring service to identify and help resolve cyber-attacks quickly, and in some cases, before they happen. Within the Australian Government, we have used security-specific automation (SOAR) to enable security teams to automatically detect and triage incidents so that they can instantly analyse and respond to threats. Activities that have previously required more than two hours triaging of cyber security incidents now take less than one minute, allowing critical resources to use their time and skills more effectively.

Ensuring compliance

Across government, regulatory standards have emerged including the ASD Essential 8, ISO27001, PCI-DSS, and the Critical Infrastructure Act for National Significant assets. Whilst there is advice and guidance available from the likes of the Australian Cyber Security Council, Government Members and the Australian Signals Directorate, many organisations will need assistance to assess and implement the required changes.

We help organisations of all sizes to achieve relevant certifications while integrating security good-practice guidelines such as the Security Policy Framework, to ensure compliance with appropriate security and privacy regulations.

Transforming State Government

Against a backdrop of unprecedented challenges, we are helping Government to transform citizen services through the provision of convenient and secure digital solutions. We bring the benefits of our cyber security expertise to each of our engagements.

CGI works side by side with Government members and our teams live and work in the same communities as the governments we serve.
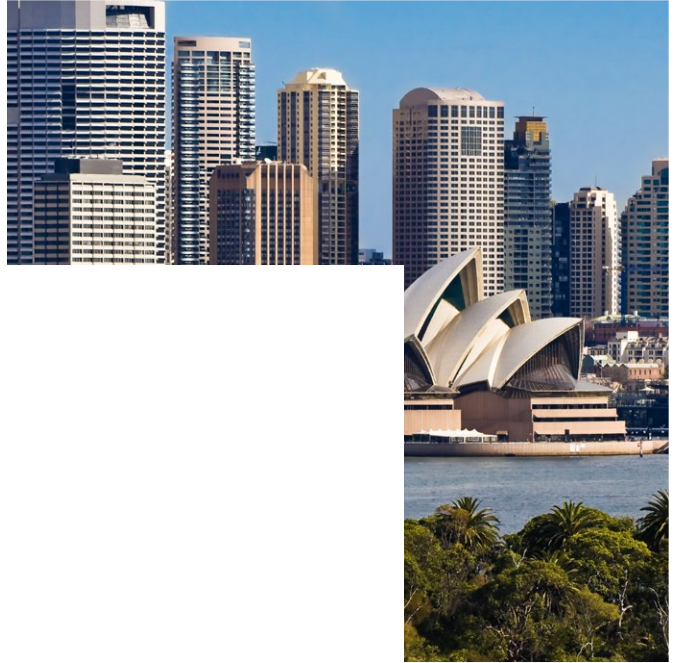

About CGI

Insights you can act on

Founded in 1976, CGI is among the largest IT and business consulting services firms in the world.

We are insights-driven and outcomes-based to help accelerate returns on your investments.
