

Pioneering IT Solutions for a Digital Future

CGI is laying the foundations in Northern Ireland to deliver world-class IT solutions to public and private sector organisations

Driving technological innovation

At CGI we deliver transformative digital services to empower organisations and enhance the lives of citizens. We develop and implement bespoke IT systems for leading organisations such as HSBC and the BBC, and provide innovative digital solutions for many government departments, agencies, and councils across the UK.

Our initial focus here in Northern Ireland is on the public sector and existing CGI global customers who already operate in the region and who can benefit from our global expertise and innovation. With core capabilities and credentials in areas such as [justice](#), [land management](#), [critical national infrastructure](#), [health](#), and [local council](#) services, we are looking forward to bringing that experience and expertise to bear in Northern Ireland.

Areas of expertise

We work with local authorities – including [City of Edinburgh Council](#) in Scotland – to increase efficiency, improve decision-making, and achieve better outcomes for citizens and communities by delivering innovative, sustainable smart places.

Benefits include more proactive estate management, better services and neighbourhoods for citizens, healthier and safer social housing with increased sustainability and regulatory compliance, improved waste management through the utilisation of smart bins, sustainable recycling and route optimisation, and the ongoing use of data to drive ‘real world’ efficiencies.

For more than 20 years, we have been at the forefront of helping the [UK criminal justice](#) system to adopt new technology and employ modern ways of working to transform the way justice is administered across the nation.

CGI’s contribution in this field is significant. Case management is at the very heart of the services we provide; we developed the first case management system nearly 20 years ago, and our experts continue to develop, deploy, and maintain these systems, enabling courts and prisons to operate effectively and efficiently today.

Founded in 1976 in Canada, CGI is now one of the largest IT and business consulting services firms in the world.

With over 400 locations across the globe, including 21 in the UK and a recently opened office in Belfast, we have built a trusted reputation across central, local, and devolved government for doing complex things well.

We are committed to building an enduring presence in Northern Ireland that will see us build a centre of digital excellence, empowering economic growth and innovation within the technology sector.

With 70,000 front-line justice users relying on our systems, these citizen-facing digital services are designed around the public who need them.

We have deep justice domain expertise, and we continue to enhance citizens' services online, increasing the efficiency of justice agencies dealing with complex, sensitive, and high-profile legal cases. Every day, more than 10,000 new cases and 3,000 new claims are processed online. This electronic access to, and submission of, case information is rapidly and securely driving UK justice digitisation.

CGI is also an expert in [land management](#), offering a comprehensive suite of solutions built specifically to manage assets. In Wales, we have delivered a single electronic register to help maintain records of all common land, towns, and village greens in its 22 local authorities. The register, which replaced the previous 50-year-old paper-based maps and records system, now provides a service that integrates a geospatial portal with back-office administration for the Welsh Government.

Our global expertise is fed into our local business, which in Northern Ireland is delivered from our newest [UK office in Belfast](#), providing for local resources to deliver the right skills from the right location.

Global expertise, local knowledge

We have a pool of experienced technology leaders, as well as newly qualified IT specialists, working on local projects as well as CGI's global portfolio. These consultants and professionals will help build our community on the ground as we continue to offer competitive job opportunities within the Northern Irish market.

We also work with local SMEs to create innovation while bolstering the growth of organisations within the IT and technology industry.

Building lasting local relationships is key to our metro model, enabling our members to work closely with our local clients where they live and work. Our 6,000+ UK members are encouraged to nominate local causes and social value projects, often working on these community initiatives alongside teams from our clients. Our members also support our [STEM @ CGI programme](#), reaching out to local schools to help foster technical skills and inspire the next generation to follow a career in IT. We offer [Higher and Degree level apprenticeships](#) alongside other technical career pathways.

Embracing Diversity and Inclusion

CGI places a strong emphasis on fostering a [diverse and inclusive work environment](#). The company's operations in Northern Ireland reflect this commitment, with a workforce that represents a wide range of backgrounds, experiences, and perspectives. This inclusive approach not only enriches the workplace culture at CGI but also contributes to a more vibrant and dynamic tech community in Northern Ireland.
