

Safety, security and operational efficiency when you need it most

Whether you're coordinating helicopter transfers in the North Sea or managing crew rotations offshore, one thing matters above all: knowing where your people are, that they're qualified and that they're safe.

At CGI, we understand the pressure of real-time operations. That's why CGI Viewpoint POB is trusted by operators around the world to provide a single, secure view of personnel movements, training status and flight scheduling, all in one place. Built on decades of frontline experience, CGI Viewpoint POB delivers critical safety, compliance and operational outcomes – helping you act quickly, meet your obligations and make confident decisions, even under pressure.

Enhancing safety

CGI Viewpoint POB ensures only qualified, properly certified personnel go offshore, and that workers are rested and alert to perform their tasks safely.

Employers and industry-approved training providers maintain up-to-date certification records directly in the system, including survival training, medical clearance and qualifications.

Every passenger must be registered and fully validated in CGI Viewpoint POB before boarding. Anyone without the required certifications is automatically flagged and prevented from flying, helping protect your people and maintain regulatory compliance.

Enhancing security

CGI Viewpoint POB provides a secure, shared dataset that includes verified identity details for every worker – such as photographic ID. This prevents identity fraud and ensures only authorised, certified personnel travel offshore.

All personal data is protected by a layered, role-based security model, giving access only to those who need it.

Core capabilities

- **Track and schedule with precision** – know where your people are and where they're going next
- **Simplify logistics** – from freight movements to helicopter transfers
- **Manage offshore operations** – safely and efficiently, in real time
- **Respond instantly in emergencies** – with real-time location and training data
- **Stay compliant with confidence** – streamline safety and tax reporting

Enhancing operational efficiency

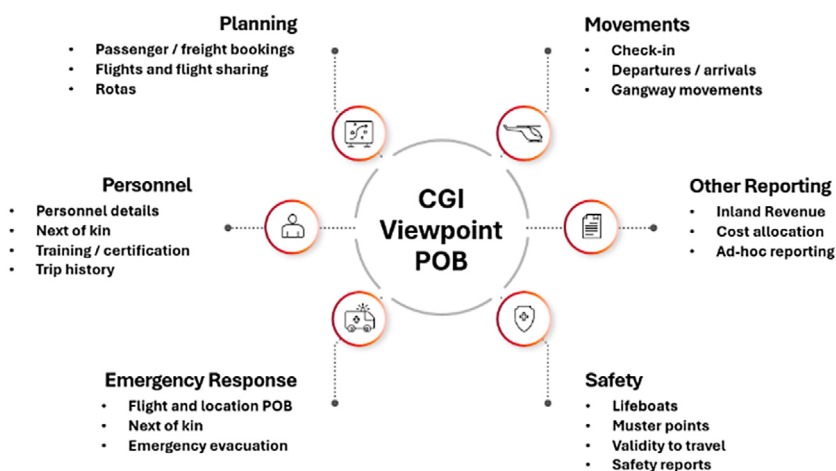

CGI Viewpoint POB brings together logistics, training, safety, and emergency response in one integrated platform – connecting flight bookings, training records and offshore personnel lists in real time.

The system supports key roles across your organisation: logistics teams plan movements with confidence, check-in staff perform quick identity checks, and employers maintain accurate personnel data.

It automatically tracks offshore time and rest periods, helping you meet national and international regulatory requirements without the administrative burden.

Case study: From industry tragedy to trusted standard

CGI Viewpoint POB was created in direct response to the Piper Alpha disaster in 1988 – co-designed with UK oil and gas operators to improve safety, accountability and emergency readiness. Today, CGI Viewpoint POB tracks 95% of all personnel movements in the UK sector, managing over 100 daily flights, 2,000+ passenger bookings, and 450 freight movements every day. It securely holds more than 160,000 personnel records and has tracked over 20 million trips to date.

The system now supports over 90 operators worldwide. As a shared service or stand-alone implementation, it is proven, scalable and trusted – from the UK and Europe to operations in Australia, the Middle East, Africa, and beyond.

Since going live in 2003, it has delivered over 99% uptime and is the industry standard across the North Sea.

About CGI

Founded in 1976, CGI is among the largest IT and business consulting services firms in the world. At CGI, we are insights-led and outcome-based to help clients accelerate returns on their investments.
