Momentum® as a Service
Risk Reduction Powered by Choice

Tailored specifically to your agency's needs, Momentum as a Service is a proven, built-for-federal ERP solution providing numerous benefits, such as: rapid provisioning, lower operating expense and more affordable software upgrades. This results-based software-as-a-service (SaaS) balances client needs for pricing, flexibility and functionality. All sustainment and infrastructure services are included. Additional benefits include improved efficiency, software standardization and predictable outlay.

CHOOSE FROM THE SPECTRUM TO OPTIMIZE NEED & CHOICE WHILE STILL MAINTAINING EFFECTIVE AGENCY OPERATIONS

MOMENTUM AS A SERVICE PROVIDES:

- A pay-on-consumption SaaS model with multi-tenant, pre-configured and sharable options or a choice for a separate instance should your agency desire autonomy

- A "personalized" application with only the functionality your agency needs

- A "single pane of glass" view for spend, service availability, performance, security and compliance postures, as well as aggregated billing and chargeback across cloud and legacy IT assets. Greater asset utilization is achieved through automation and software standardization. Standardization helps reduce or even eliminate downtime and the resulting financial consequences.

- Combined strength in IT services and cloud delivery, providing a transparent solution for managing hybrid IT environments

- Software upgrades released at regular intervals per contract terms to ensure federal mandates are employed. Upgrade test outcomes are reviewed by agency control boards for approval.

- Standard federal integrations and financial reporting templates maintained by CGI

- A holistic security approach for all IT services and assets. Deploy your sensitive workloads with confidence while simultaneously complying with strict standards.

- Helpdesk, onsite support and training

PREDICTABLE COSTS SUPPORT AGENCY MISSION DELIVERY

Momentum as a Service pricing benefits agencies by reducing risk with predictable spend for software services and management, allowing agencies to focus on providing service to constituents.

Federal agencies, bureaus and federally-funded nonprofits face complex challenges that often inhibit ability to provide taxpayer services and fulfill agency-specific missions.

Organizations find themselves budget constrained as they manage legacy system operations and maintenance costs, while simultaneously preparing for and responding to ever-increasing cyber threat outlay.

As legacy systems age and as emerging technology evolves, agencies face increasing risk exposure that creates strain on IT budgets and resources. CGI's predictive approach reduces agency risk.

MOMENTUM AS A SERVICE SNAPSHOT

BENEFITS OF SUSTAINMENT AS A SERVICE

- CGI's "personalized" approach to software sustainment services allows agencies to select one of our infrastructure-as-a-service (IaaS) options or employ sustainment services on your agency's established infrastructure.
- Governed services with price based on service level agreements
- Valuable predictability and flat fees

INFRASTRUCTURE AS A SERVICE OPTIONS

- Traditional hosting in a virtual cloud: dedicated infrastructure
- FedRAMP Public Cloud: Virtual Machines IaaS, Web Hosting Platform as a Service (PaaS), FedRAMP provisional authorization, on-demand provisioning.

With either IaaS option, agencies receive value through services including connectivity to agency and centralized systems, hardware and associated operating software, disaster recovery, managed security, infrastructure related help desk support, incident and problem management, performance and utilization monitoring, trending and reporting, event tracking and audit controls.

SHARED SERVICE OFFERING: Momentum is offered as a Federal Financial Management Shared Service and currently provides civilian agencies, defense and intelligence communities, and legislative and judicial branches of government beneficial support through shared services programs including USDA's FSSP.

WHY CGI?

- Long-standing cybersecurity practice with a global network of security operations centers and IT security certification labs.
- High-touch, customer-centric service model with global presence and local accountability.
- Enabling IT services designed to meet business and mission needs.
- 40+ years of IT service management expertise.
- Proven expert delivery of **FedRAMP P-ATO** and **DISA P-ATO** cloud solutions.

ABOUT CGI

Since 1976, CGI has partnered with U.S. defense, civilian and intelligence agencies to support their mission-essential needs at every stage of the program, product and business lifecycle.

As a global leader in IT, we deliver end-to-end services and solutions in application and technology management, systems integration and consulting, business process management and services, advanced engineering and technology services and operational support services.

Our mission expertise includes defense, intelligence, environment, financial management, healthcare, homeland security, financial management and housing. CGI has approximately 70,000 employees in locations worldwide.
