

CGI Unify360™ Portfolio Manager

Under pressure to address new risks and opportunities in a dynamic business environment, today's organizations need to achieve greater agility, cost efficiency and security in their IT portfolios. No longer is IT simply a means to support the business. It is a driver of business transformation itself.

THE CHALLENGE

Too many organizations are burdened by the constraints of aging technology, architectural complexity and IT sprawl. Negative impacts include high maintenance costs, lack of agility, poor alignment with business objectives, and potential exposure to cybersecurity risks. For some, "lights-on" costs can account for as much as 90% of IT budgets.

The resulting poor quality and performance of the IT portfolio makes it difficult to meet current business demands, let alone adopt new technologies to drive digital transformation.

A modern and fine-tuned IT portfolio is a crucial enabler of change and growth. Yet many organizations lack the internal resources or expertise to develop an effective method for managing, rationalizing and governing their IT portfolios.

THE SOLUTION

CGI Unify360 Portfolio Manager provides a comprehensive approach to modernize, transform, optimize and manage application assets. It also helps organizations simply get a better understanding and control of their systems. The solution uniquely combines a proven methodology and a powerful software application to help organizations:

- Gain a deeper understanding of their IT portfolio, including its composition and complexity, and the relationships among its elements
- Drive action through improved insight to achieve digital transformation
- Adopt a hybrid IT approach to optimize business, technology, cost, security and performance
- Establish a continuous improvement approach to drive portfolio evolution
- Achieve the necessary organizational agility to respond to threats and opportunities

BENEFITS AT A GLANCE

CGI Unify360 Portfolio Manager helps organizations gain critical insight into their IT portfolios which allows them to modernize their legacy systems and transform their business. It is a key enabler for digital transformation.

Specific benefits include:

- Enables action through insight
- Accelerates and streamlines digital transformation and modernization
- Reduces operational costs
- Improves quality, security and business and technical alignment of the IT portfolio
- Provides a solid governance framework and process model for continuous improvement

HOW IT WORKS

CGI Unify360 Portfolio Manager defines the phases, activities, roles and responsibilities required for effective application portfolio management. It is based on a continuous improvement process encompassing activities to *plan*, *measure*, *analyze*, *transform* and *communicate*. The methodology is supported by a software application to accelerate and streamline data collection, analysis and reporting.

Grounded in enterprise architecture and IT governance principles, CGI Unify360 Portfolio Manager provides a holistic view of application health by analyzing metrics in architecture, business and operations. This balanced view makes sure that all stakeholder concerns are included and creates a holistic picture of the IT portfolio to ensure alignment and optimization of business, technology and operational needs. This creates a better understanding of the details and intricacies of the portfolio and helps organizations understand the business value, complexity and costs of their systems to make informed transformation and investment decisions.

IT MODERNIZATION WITH CGI UNIFY360

CGI Unify360 Portfolio Manager is an integrated component of the CGI Unify360 Hybrid IT Management Suite. Portfolio Manager is the cornerstone of our IT rationalization, transformation, modernization, data center consolidation, cloud migration and transformative IT outsourcing service offerings. It provides the governance, strategic approach and rigor to manage and ensure the successful delivery of these services.

UNIFY YOUR IT UNIVERSE

CGI Unify360 HYBRID IT OFFERING FRAMEWORK

The CGI Unify360 Portfolio Manager is an offering within the CGI Unify360 Hybrid IT Management Suite. CGI Unify360 enables holistic management of both on-premises and cloud-based services. It provides a portfolio of enablement consulting, managed services and infrastructure options, as well as a single management platform for operations, brokerage, governance and security.
