"With (CGI Advantage), the Commonwealth of Massachusetts has improved efficiency, reduced costs and increased revenue using with built-for-government functionality that leverages modern Web-based technology."

Martin Benison,
Comptroller, Commonwealth
of Massachusetts

The Commonwealth of Massachusetts reduces cost and increases productivity with CGI Advantage™.

The Challenge

The Office of the State Comptroller was seeking a new financial and labor cost management system to provide a modern functional and technical platform. By moving to a Web-based architecture they planned to automate operations and streamline business processes to increase productivity and improve access to information.

How CGI Helped

After a careful evaluation of the marketplace, the Commonwealth selected CGI and the Web-based, built-for-government CGI Advantage solution. A CGI Advantage client since 1986, the Commonwealth would leverage out-of-the-box functionality to modernize their technology, streamline business operations and achieve a more cost-effective baseline functionality

Results

The Massachusetts Management Accounting and Reporting System (MMARS) went live on time and on budget, and is today one of the largest state-wide, Web-based financial management systems in the country. Building upon its initial successes, the Commonwealth has realized the following benefits from the system:

- Streamlined processes through automation and workflow
- Improved tracking, management and analysis of financial data
- Reduced report printing, storage and distribution costs
- Reduced cost of maintenance and simplified upgrades
- Improved collections and increased revenues
- Increased productivity through real-time interactions

The bottom line: CGI delivered an on-time, on-budget financial and labor cost management solution to the Commonwealth of Massachusetts with CGI Advantage, through client-focus, government expertise and off-the-shelf capability.
