- Able to quickly adapt eDiscovery solutions to clients' specific needs, as well as add new features

REPRESENTATIVE CLIENTS

- Large Canadian bank
- Large financial services client
- Canadian federal government
- Leading provider of delivery services

DELIVERING eDISCOVERY EXPERTISE

CGI offers a team of solution experts in both Autonomy Teamsite Content Management and Autonomy IDOL Enterprise Search. We've successfully delivered Autonomy software implementations both within the Canadian federal government and for large Canadian financial institutions. Our team has both the know-how and experience to help drive your performance and profitable growth through best-in-class eDiscovery technologies.

Delivering your vision

CGI recognizes that, while an effective eDiscovery program positions your team to achieve optimal business performance, maximum value can only be realized when business requirements determine system functionality and when program implementation occurs as a part of an enterprise-wide alignment effort.

Already established as a leading information technology and business process services company, CGI is also an industry leader in the design and delivery of effective eDiscovery solutions. We recommend investing in modernizing legacy systems only after the following have been achieved:

- An effective business solution has been mapped out
- When full alignment of services and business processes has been facilitated
- When supporting technologies offer functionality that is effective, affordable, integrated, interoperable and agile

A trusted Autonomy partner

CGI leverages its partnership with Autonomy, a leading eDiscovery pioneer and innovator, to help ensure our clients' success with their eDiscovery initiatives. All CGI practitioners receive the best technical training available through Autonomy. CGI also follows best practices in terms of implementing eDiscovery across the Electronic Discovery Reference Model (EDRM).

CGI

The growing demand for reliable eDiscovery

The eDiscovery industry is expected to grow tremendously over the next few years. To meet the demand, CGI is continuing to develop its eDiscovery experts by investing in training and professional development. We're recruiting and developing talented, experienced individuals to expand our service offerings and better address the evolving eDiscovery needs of our clients.

The CGI difference

CGI treats information as a valuable strategic asset to be leveraged and shared. When developed into actionable business assets, and when used to enhance communication and service to clients, information acts as a powerful catalyst to optimize business performance.

CGI is also vendor neutral. We only recommend approaches, tools, methodologies and systems for eDiscovery that serve the best interests of the client, and only after conducting a thorough and objective assessment of client needs and requirements. We understand that effective eDiscovery helps, among other things, to minimize costs and establish the preservation of electronic documents.

CGI has strong remote delivery capabilities with a breadth of seasoned Autonomy and information management experts ready to step in and help our clients meet their business requirements.

To help your organization get the best value from knowledge, innovation and information, CGI offers an approach to information management that commences with a determination of your corporate needs and business requirements, and only proceeds further when:

- The value proposition for any enabling systems is clearly established
- Implementation occurs as part of enterprise-wide service transformation efforts
- An effective strategy has been identified to address change management
