

Next generation airport operations management

Airports today are facing increasing competition, security and safety concerns, government regulation, and passenger expectations. At the same, they're under pressure to keep prices low and quality high.

Efficient airport operations management is critical to staying ahead of the competition. CGI's GO Airport Operations Suite provides a comprehensive technology and business platform for optimizing airport operations management, enabling airports to drive both performance and profitability.

KEY FEATURES

The demands of a modern airport require a robust and intelligent information system for managing operational processes and activities. CGI provides such a system through GO. Built by experienced airport operations experts, GO is an airport operations database (AODB) that manages all aspects of an airport's daily operations.

Key features include the following:

- Global view of operations, including accurate and complete information on every flight, resource and operations area
- Fully customizable public information capabilities to keep passengers and other stakeholders informed of flight and other key information
- Full integration with a wide range of airport systems, including RMS, FIDS, CUTE, CUSS, ATC, A-CDM, BHS, (V-)DGS and DCS
- Graphical displays providing "big picture" views and a dynamic, user friendly, "drag and drop" interface
- Multi-airport, multi-device and multi-language support
- Full reporting capabilities and built-in operational dashboard
- Exception display that highlights resource allocation conflicts and information gaps

GO is also fully customizable and can be integrated with almost any airport infrastructure.

KEY BENEFITS

GO supports the operational needs of the full spectrum of airports, from international hubs to smaller regional terminals. Key benefits of the system include the following:

- Reduced management efforts by up to 80%
- Reduced taxi time (and associated fuel consumption) by up to 10%
- Reduced planning efforts by up to 87.5%

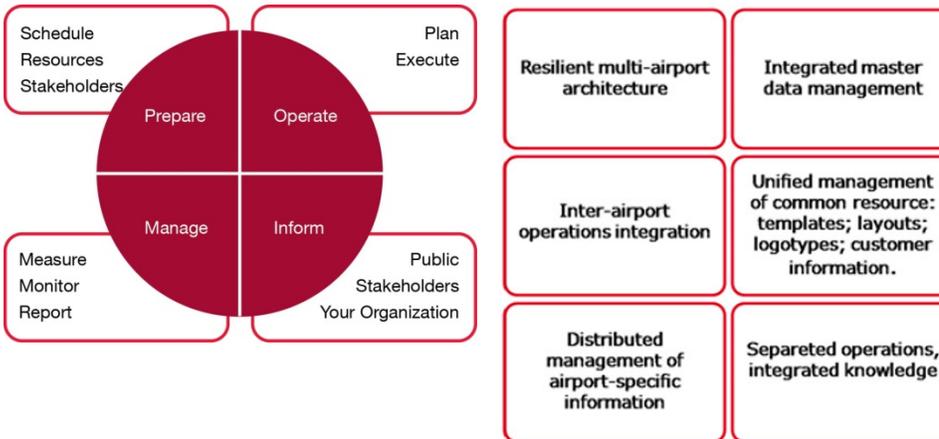

FACT SHEET TRANSPORT

"The success of GO is explained by the fact that it was designed to bring together two views of the airport business: operational and management"

RUI ALVES
OPERATIONS MANAGER OF
OPORTO AIRPORT

- Improved resource allocation
- Standardized processes
- Reduced costs
- Increased productivity

OUR EXPERTISE

GO clients benefit from CGI's 30+ years of aviation experience. We're also the only global systems integrator to own our own AODB solution and product roadmap. Our experience includes serving 4 of the top 5 major global airlines and 5 of the top 10 airports in Europe.

CGI's aviation experts offer in-depth knowledge of the technologies vital to airport operations combined with an understanding of the unique needs of our clients. We work to that our clients benefit from the greatest possible operational efficiencies and business results.
