

CGI Unify360

Unify your IT universe

As cloud computing continues to emerge as a key enabler of both digital transformation and operational efficiency, hybrid IT environments combining cloud and traditional IT delivery models are on the rise. Such environments require a holistic strategy backed by solid governance to minimize cost, risk and “sprawl,” and to maximize agility and value.

For enterprises seeking greater control of their hybrid IT universes, the CGI Unify360 Hybrid IT Management Suite enables holistic management of both on-premises and cloud-based services. This robust, integrated offering helps organizations maximize their IT portfolios for greater agility, innovation and competitive advantage. The key service layers of Unify360 include:

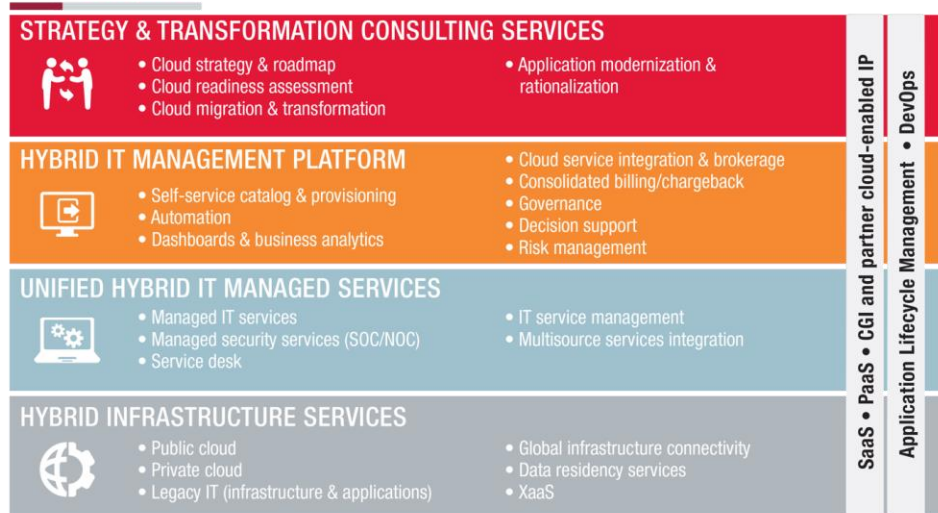

- **Expert guidance.** From identifying current assets including “shadow IT,” to assessing cloud readiness and guiding application rationalization, refactoring, workload transitions and balancing, Unify360 offers expert advice and roadmaps to optimize hybrid IT architectures and migrations.
- **Hybrid IT management platform.** Our common Unify360 platform for brokering, acquiring, operating, securing and governing all elements of a hybrid IT universe enables: “single pane of glass” view into spend, service availability, performance, security and compliance postures; aggregated billing and chargeback across cloud and legacy IT assets; and greater asset utilization through automation and standardization.
- **Reliable service integration and management.** Our global, 24x7 management and integration services include ITSM, service desk, managed security, brokerage and multi-vendor management. A holistic security approach allows organizations to deploy sensitive workloads with confidence, address emerging threats, and comply with data privacy and sovereignty regulations.
- **Right cloud for the work.** CGI’s cloud strategy is to help clients use virtually any cloud or combination (whether private, public or community, and almost anything “as a service”) to realize business value. Private clouds can be on client premises or in CGI data centers to meet in-country, data sovereignty requirements. Public clouds like Microsoft Azure and AWS can be managed to maximize value delivered. All can be integrated seamlessly, including with legacy IT.

Unify360 also facilitates modernization and “cloudification” of business applications (e.g., evolution to a SaaS delivery model), as well as more flexible and rapid DevOps to support innovation and transformation.

- Unified, transparent management of on-premises and cloud-based services
- Open management platform ecosystem adaptable to client-specific requirements
- Integrated decision support model
- Certification for highest-security workloads
- Advanced data security for continuous protection and accelerated threat response
- Dedicated practice for identifying and applying innovation for clients
- Strong, market-relevant partnerships
- Global coverage

CGI Unify360 HYBRID IT OFFERING FRAMEWORK

CGI Confidential, IT-000-088

Key benefits of CGI Unify360

- **Lower risk** – Optimize IT resources to reduce risk and speed deployments through successful and predictable migrations, IT rationalization and workload balancing.
- **Reduced costs** – Streamline asset management and increase utilization through automation, standardization and best-fit infrastructure mix for diverse workloads, reducing O&M costs. Realize more reliable, efficient and predictable budgeting with holistic cost management.
- **Innovation** – Enable creative new approaches to preserve existing investments, fill gaps and maximize potential for modernization and rationalization.
- **Flexibility** – Increase agility to innovate and move toward DevOps, and realize greater choice in managing IT services.
- **Business-IT alignment** – Improve line of sight between IT resources and business objectives to optimize investments, increase agility and support innovation, reducing time to market and delivering what the business requires.

Why CGI

- Trusted partner with front-line experience in migrating, managing and governing cloud services globally
- Long-standing cybersecurity practice including a global network of security operations centers and IT security certification labs
- High-touch, client-centric service model with global presence and local accountability
- Enabling IT services designed to meet business and mission needs
- 40 years of IT service management expertise

ABOUT CGI

Founded in 1976, CGI is one of the largest IT and business process services providers in the world. Operating in hundreds of locations across the globe, CGI helps clients become customer-centric digital organizations. We deliver high-quality business and IT consulting, systems integration and transformational outsourcing services, complemented by more than 150 IP-based solutions, to support clients in transforming into digital enterprises end to end. CGI works with clients around the world through a unique client proximity and best-fit global delivery model to accelerate their digital transformation, ensure on-time, within budget delivery, and drive competitive advantage in today's increasingly digital world.
